

MESTIERI

Company *profile*

Every great architectural project
begins with a vision.

Transforming it into reality requires
ancient *craft* methods integrated
with new competencies, advanced
engineering, structured project
management and ongoing dialogue
with architects and designers.
It demands a deep understanding
of materials and a mastery
of fabrication processes.

Italian manufacturing has been built
by generations of learning, skill,
and the ability to address technical
complexities to achieve coordination
across different specializations.

Mestieri is a group of specialized Italian companies
dedicated to the bespoke creation of high-end
interiors and architectural elements

We craft timeless creations

(BUDRI® +  + lamparredo + & SKILLMAX + ) MESTIERI

Pillars

Italian heritage, Worldwide vision

Heritage belongs not only to the past, but finds its fulfillment by bringing the best of Made in Italy to the world's most prestigious projects.

Integrated Ecosystem

Specialized companies collaborating as a unified entity create value greater than the sum of parts. Vertical integration ensures direct control over quality and processes: rapid decisions, real-time coordinated fabrication with consistent results.

Craft meets Engineering

Artisan fabrication reaches its highest expression when combined with advanced engineering and rigorous project management. Unique works can only be created where aesthetics and performance compliment each other.

Partnering for Excellence

Supporting architects and designers as their single technical and operational partner means evaluating feasibility, proposing solutions and anticipating issues. We provide an ongoing presence that transforms bold ambitions into concrete realizations.

Bespoke by Nature

In the luxury sector, every project demands unique responses: solutions conceived to exist only once, in that space, for that function.

Building Tomorrow's Masters

Investing in training new generations preserves artisan expertise while integrating contemporary technologies. We are committed to ensure Italian excellence continues to evolve, generation after generation.

Engineering + Project Management

Mestieri is a comprehensive partner for complex projects worldwide, with recognized expertise in engineering innovation and operational management, ensuring quality and milestone adherence. We coordinate our internal ecosystem of manufacturing companies under unified direction to transform design visions into reality.

Through Total Solution Interiors (TSI), Mestieri extends its capabilities to the naval sector, creating bespoke environments for cruise ships and superyachts.

TECHNICAL AND OPERATIONAL MANAGEMENT + FULLY INTEGRATED PRODUCTION

Decorative Marble

BUDRI®

For over 60 years, Budri has delivered bespoke projects in marble, onyx, and semi-precious stones. The combination of advanced technologies and artisan expertise enables the company to produce architectural structural elements including columns, portals, fountains, balustrades, capitals, and wall and floor cladding, as well as inlays and mosaics for both interior and exterior applications. Budri also creates furnishings and fixtures in collaboration with international designers. The company operates its production facility in Modena, with a showroom in Milan and offices in London and Lugano.

TECHNICAL AND OPERATIONAL MANAGEMENT + FULLY INTEGRATED PRODUCTION

Ornamental Metal

Ceolin produces architectural elements through metal fabrication in titanium, zinc, stainless steel, corten, bronze, and brass, combining artisan care with industrial production standards: façades, doors and windows, staircases, structural and decorative components.

Lamparredo specializes in the custom fabrication of metal furniture and ornamental elements, with unique finishes in stainless steel, brass, and bronze, at any scale: from decorative accessories to architectural cladding.

Production capabilities

- Milling
- Calendering
- Painting
- Welding
- Forging
- Folding
- Finishing
- Assembly
- Laser cutting
- CNC machining

TECHNICAL AND OPERATIONAL MANAGEMENT + FULLY INTEGRATED PRODUCTION

Interior Millwork

With specialized expertise in wood fabrication and a multi-material approach, Skillmax creates bespoke surfaces and furnishings for luxury hotels, Michelin-starred restaurants, prestigious residences, and retail spaces. The showroom, in Treviso, features full-scale mock-ups for testing and experimentation, with over 3,000 available finishes.

Pantographing
Veneering
Assembly
Polishing
Finishing

Global presence

Mestieri's design and manufacturing expertise originates in Italy, where all works are conceived and produced, reaching worldwide markets through a strategic network that includes offices in New York and London. Mestieri operates in the luxury contract sector and, through TSI, in the global naval industry, bringing Italian quality to the most prestigious civil and naval projects.

Vertically integrated processes

We call it *solution-driven creativity*, the ability to understand, solve, and build what others deem impossible

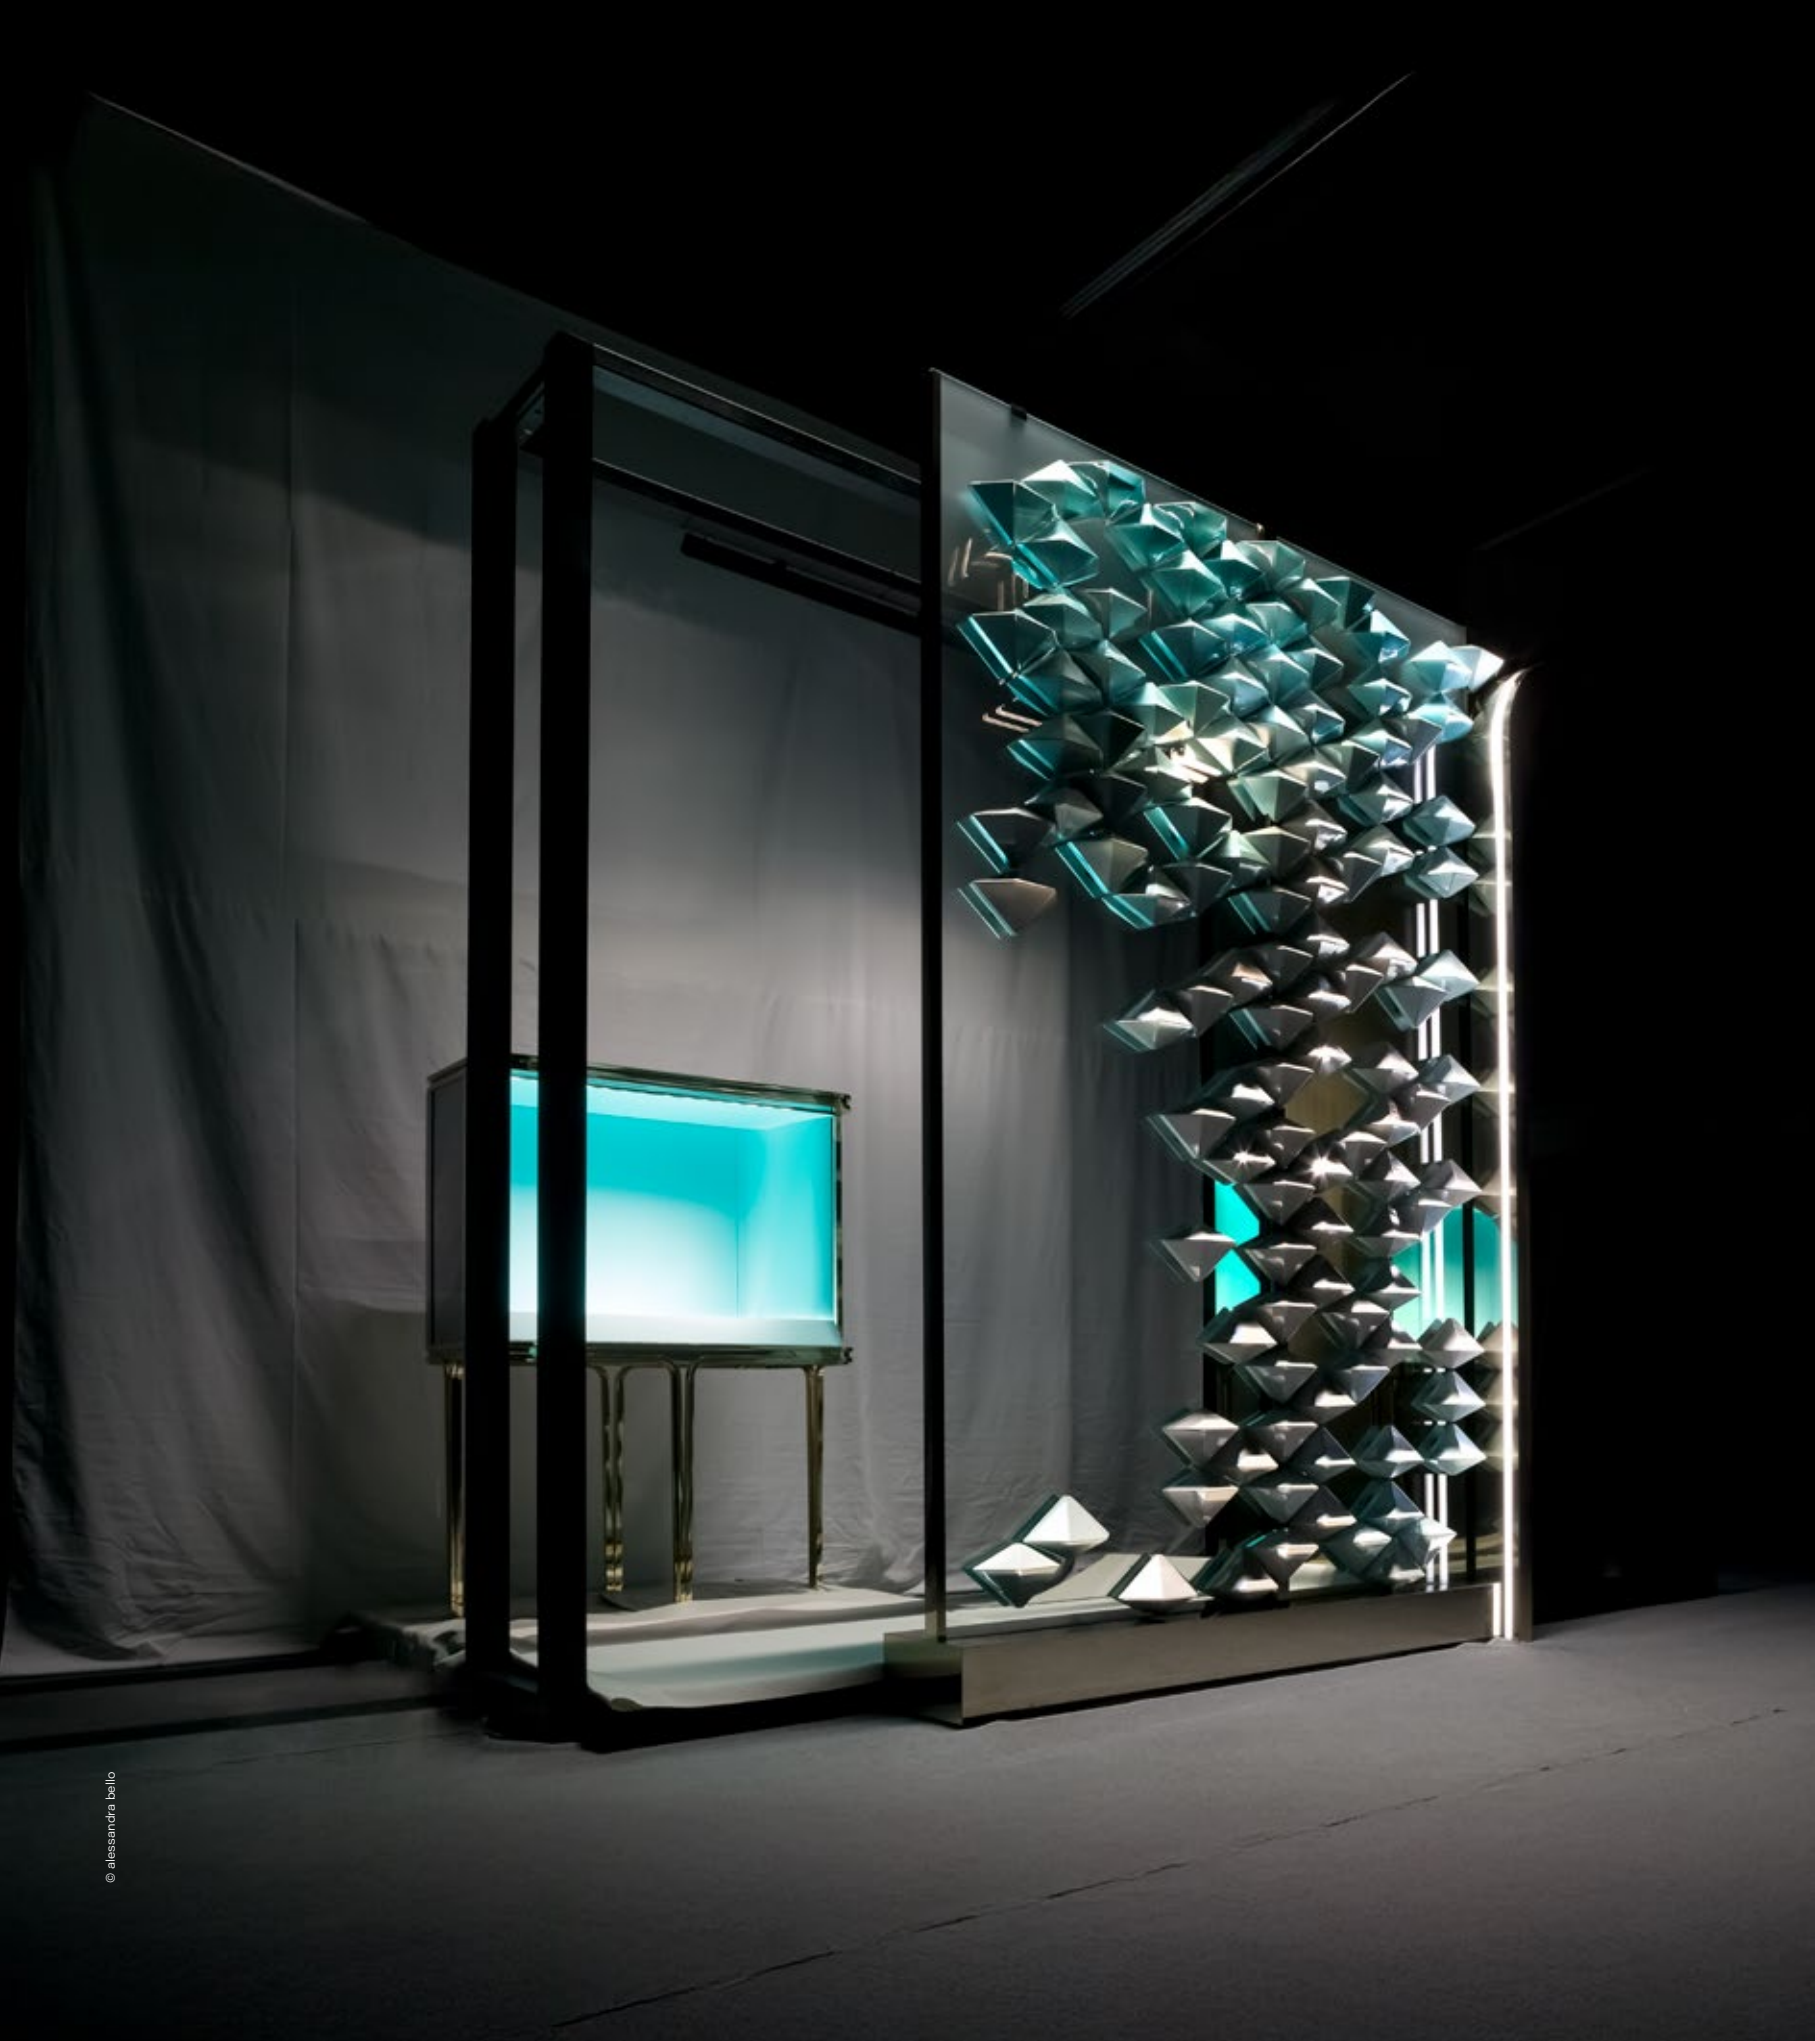

Consultancy and design assist

The earliest stages are decisive in guiding design choices toward efficient and coherent solutions. Mestieri supports architects and clients, offering feasibility assessments, cost estimates, and guidance on the best possible options. This structured approach fosters informed decisions and ensures alignment with both architectural and regulatory requirements.

R&D and value engineering

Every Mestieri creation is the outcome of in-depth research. Exploration of materials, technologies, and innovations drives products that excel in aesthetics and performance alike. The technical department orchestrates engineering development, defines application systems on site, and evaluates static, structural, and dimensional parameters through advanced 3D scanning. Design concepts are translated into precise models, ready for production and installation.

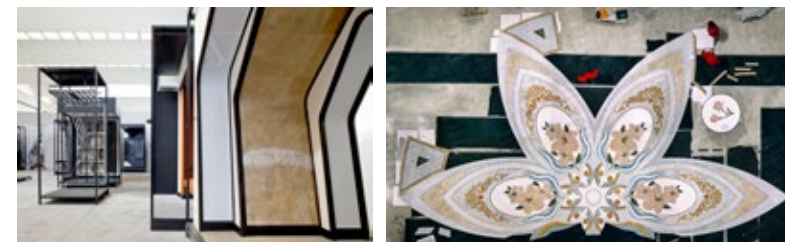

DESIGN + **MOCKUP** + TESTING + PRODUCTION + INSTALLATION

Mockups: where vision becomes tangible experience

Mockup and sample development

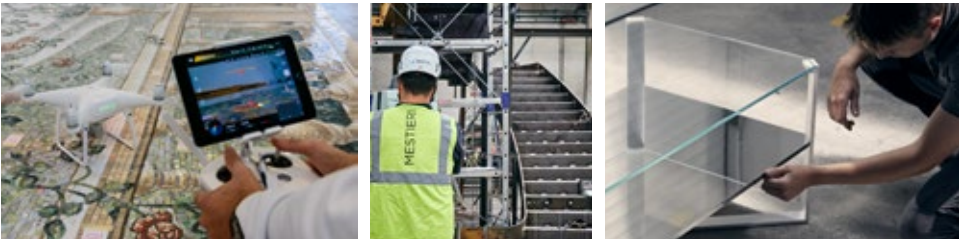

During the design process, Mestieri offers clients tangible previews of the final outcome. Mockups and samples make it possible to explore materials, finishes, and proportions long before production begins. Seeing and touching every detail is part of the experience. This stage allows for refinements and ensures harmony with the architectural vision.

Our creations
undergo *testing* to
the *highest international*
standards to ensure
lasting quality, safety,
and performance

Performance testing

Every manufactured element is tested in specialized laboratories equipped with advanced technologies that verify the performance specifications required by each project. Testing protocols are calibrated to the project type, ensuring performance meets requirements, identifying potential issues before installation, and guaranteeing high quality standards and long-term reliability.

DESIGN + MOCKUP + TESTING + PRODUCTION + INSTALLATION

Crafted beauty: an uncompromisingly tailored approach that unites artisanal mastery with cutting-edge technology

Artisan expertise and advanced technological capabilities

This synergy distinguishes every creation: elements imbued with character derived not only from materials but from those who shape them through skill and technology. In a market governed by increasingly stringent standards, the objective is to exceed expectations by elevating each architectural element beyond technical function, making it an integral part of the prestige experience.

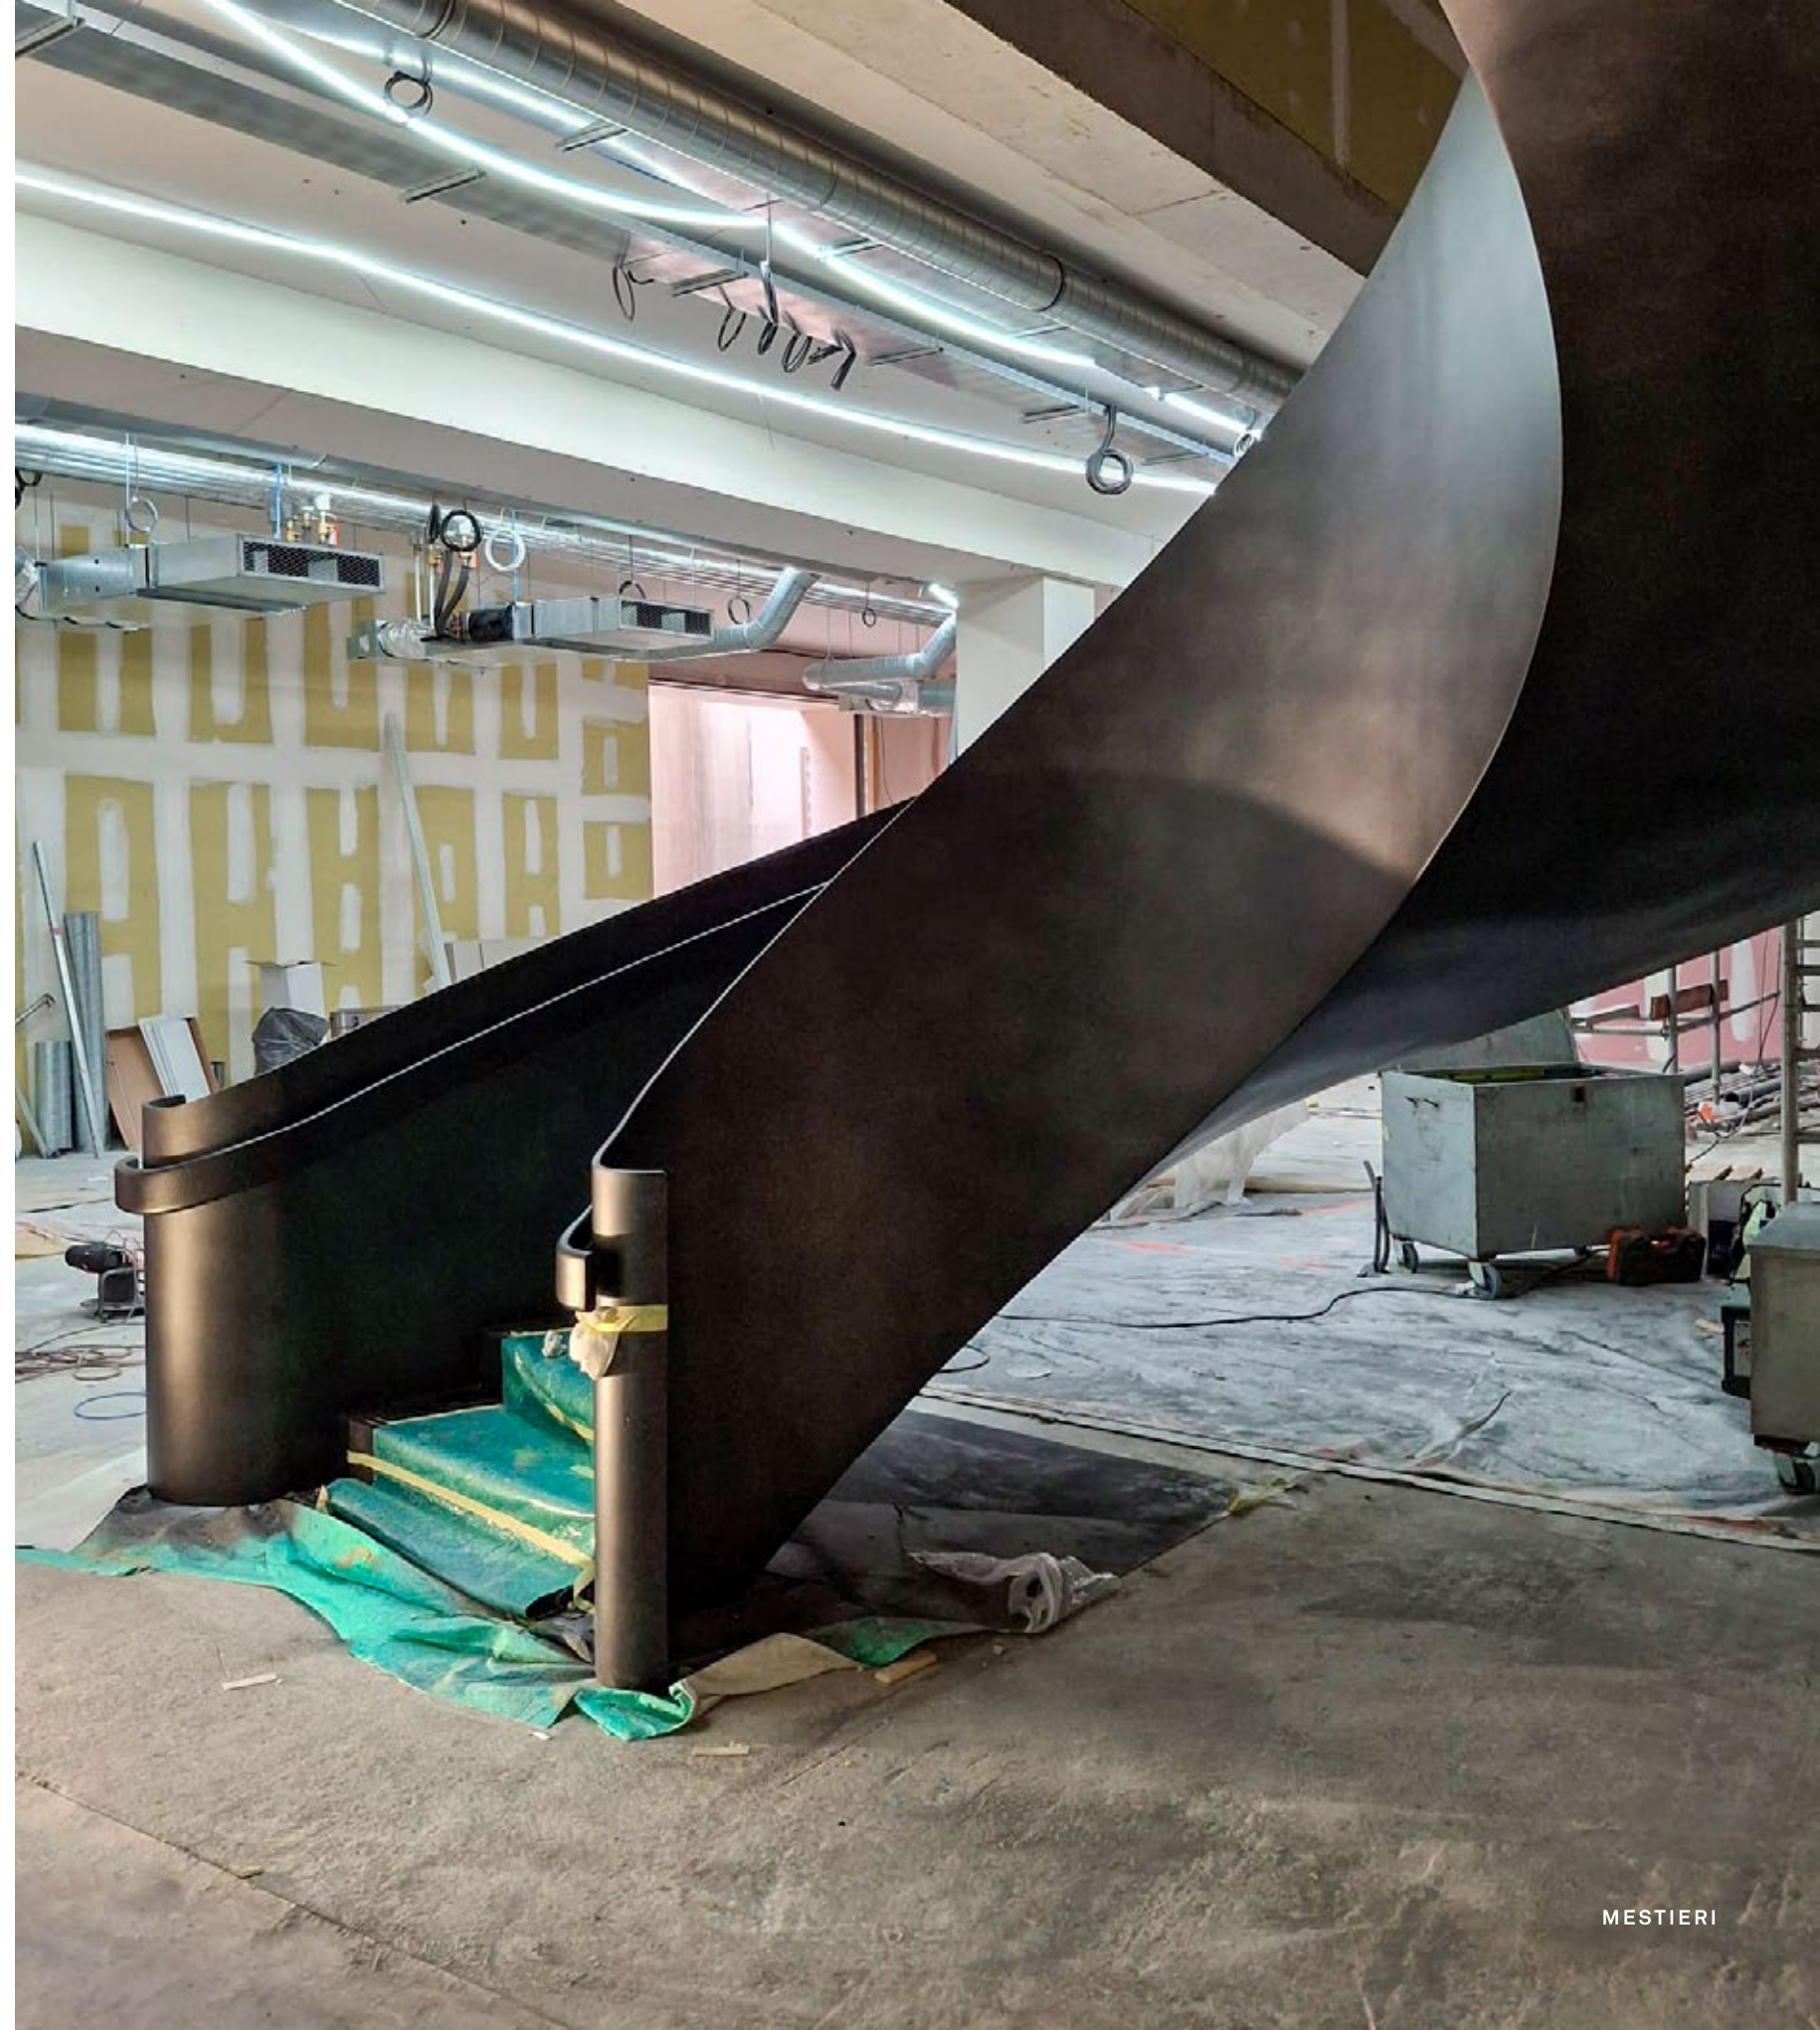

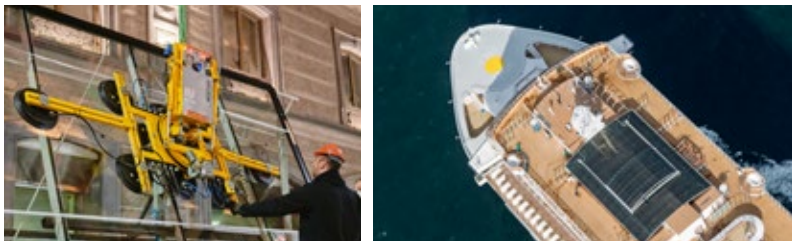

Through *integrated*
and *comprehensive*
management we challenge
complexity to achieve
uncompromising quality

Dedicated project teams

Every project is supported by a dedicated team that coordinates and oversees all phases, from engineering through installation. This approach ensures solutions that perfectly align with the original project vision.

Expert installation and maintenance

Installation is a complex operation requiring expertise and management capabilities in challenging contexts. Experienced and qualified technicians operate in full compliance with landscape, architectural, and safety constraints, addressing even the most demanding situations. Mestieri's support continues beyond installation through scheduled maintenance services calibrated to each element type and material, preserving quality and performance over time.

Crafted
solutions

Exclusive Windows and Iconic Façades

Custom metal-framed glazed windows and doors, designed to integrate seamlessly into the architecture, define the communication research center within a 17th-century Venetian villa restored by architect Tadao Ando.

←

In Stuttgart, for an international jewellery maison, development of a custom-engineered façade system to install 2,829 three-dimensional ceramic elements with iridescent finish. The designer's challenging objective was to create a "floating" effect that modulates the perception of transparency and opacity. The technical solution manages the manufacturing tolerances of the ceramics, ensuring millimetric positioning of each element through concealed anchors both inside and outside the glass surface. The system also allows annual inspections while preserving the overall integrity and visual effect of the façade.

→

Internal bedroom doors in metal serve as decorative elements in a historical Venetian palazzo converted into a luxury hotel. The custom cloudy-effect finish by interior designers Lecoatic Scotto reflects the elegance of the spaces.

The interior of a Milan luxury hotel unfolds around a courtyard-foyer crowned by a large, organically shaped glass roof. Every metal blade and pane of glass features a unique curvature, individually crafted to give the space movement and dynamism.

In Piedmont, the factory store of an Italian luxury automotive brand merges steel, metal panels, and a glass envelope into an organic architectural form.

Sculptural Staircases

For a boutique on Old Bond Street in London, awarded the Wallpaper Design Award, creation of a custom helical staircase with metal structure and black and white open-vein marble cladding: a combination of colors and veining similar to natural patterns but difficult to replicate by hand. Each tread is different from the others, the result of a complex processing technique specifically developed to perfectly match the designer's overall vision.

A monumental helical staircase in corten steel, with a diameter of 3.20 m and height exceeding 12 m, created for a building that won the Italian Architecture Prize promoted by MAXXI and Triennale Milano as best building 2024.

At the exclusive Galleria Alberto Sordi in Rome, a helical staircase with central load-bearing column, entirely fabricated in heavy-gauge steel structure. Glass balustrade.

In Madrid, a luxury French maison's helical staircase fabricated in steel with glass balustrade, handcrafted and handstitched leather-wrapped handrails and support panels for finishes.

In London, for an international luxury maison, a staircase featuring a steel load-bearing structure, terrazzo treads, glass balustrades, and wood handrails.

Luxury Surfaces

The Abu Dhabi Mosque is the second largest in the world after the one in Medina. Marble, inlays, and mosaics combine in elegant floral geometries that give the imposing architecture a modern and refined appearance. The exterior courtyard is entirely paved with a vast floral composition created through 4,000 inlay and mosaic panels across approximately 17,000 m² of surface area, making it the world's largest floral floor inlay. Lead contractor Fantini Mosaici.

←

In Rome, in Piazza di Spagna, for an Italian luxury maison, execution of a bespoke project comprising warm-toned premium marble flooring, solid grey chalked marble columns, artistic mosaics, surfaces, and architectural elements.

→

The Bulgari Hotel in Rome, recently awarded world's best luxury hotel. High-end boiserie and wood inlays create the hotel's atmosphere of sophisticated elegance.

In Sydney, for an international pearl and fine jewelry maison, exterior façades in Iranian White Onyx with carved relief work. The pearl motif was repeated inside the boutique with hand applied gold leaf accents. The hemispheres evoke the pearl necklaces that characterize the brand.

Cheval Blanc Paris, LVMH jewel located in the Art Deco La Samaritaine building: the lobby is bathed in light through vertical stainless steel surfaces with a shimmering Light Gold finish. Every aspect from the entrance vestibule to decorative screens, and the façades to the reveals: is engineered to alternate glossy and matte finishes in elegant continuity.

Tailored Interiors

Palazzo Avino, jewel of the Amalfi Coast is nestled among cobblestone alleys and lemon groves. For the suites, complete bespoke furnishings where fine wood combines with artisan ceramics, antiqued mirrors, and premium fabrics, creating atmospheres in harmony with the landscape's beauty.

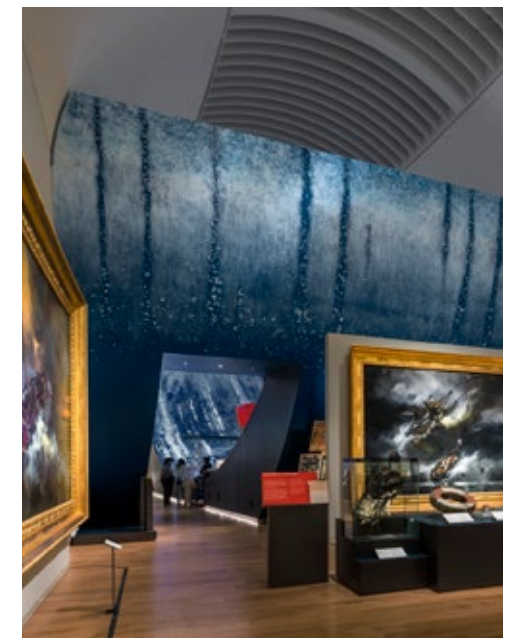

The Excelsior, a Luxury Collection Hotel, Florence: the Cosimo Rooftop Restaurant & Bar overlooks the city with 360° views. Bespoke furnishings and surfaces create an elegant atmosphere where design meets the Florentine skyline.

On the 7th floor of Armani Hotel Milano, the Armani/Bamboo Bar, named Best Hotel Bar 2025 by Forbes Travel Guide, opens onto the city with breathtaking views. Bespoke furnishings and surfaces translate the brand's distinctive minimalist and contemporary language into an exclusive space.

In the heart of Palazzo Avino in Ravello, a boutique where bespoke furnishings and interior installations discreetly integrate with the historic architecture.

At the National Maritime Museum in Paris, in the Palais de Chaillot at Place du Trocadéro, La Vague is an interactive installation that recreates a maritime storm through a monumental wave in steel structure (20 meters long, 12 wide, 8 high) onto which dynamic images are projected. Bespoke display cases, engineered with integrated security and climate control systems, protect the maritime collection.

Mestieri brings its manufacturing excellence aboard yachts and cruise ships, both in new builds and refurbishment of existing vessels. From design through installation, exclusive spaces including public areas, restaurants, cabins, and suites are created bespoke: to meet the technical requirements of the industry without compromising luxury and refinement.

Mein Schiff Relax, TUI Cruises' newest ship:
6,600 m² of bespoke installations for the public
areas on decks 16 and 17. Bars, restaurants,
lounges, infinity pool, and splash pad with
interactive water features for children.
Furnishings, decorative elements, and premium
finishes where functionality and aesthetics merge.
