MESTIERI

Tailored Interiors

Every great architectural project
begins with a vision.

Transforming it into reality requires
ancient *craft* methods integrated
with new competencies, advanced
engineering, structured project
management and ongoing dialogue
with architects and designers.
It demands a deep understanding
of materials and a mastery
of fabrication processes.

Italian manufacturing has been built
by generations of learning, skill,
and the ability to address technical
complexities to achieve coordination
across different specializations.

Mestieri is a group of specialized Italian companies dedicated to the bespoke creation of high-end interiors and architectural elements

We *craft* timeless creations

(BUDRI® + CEOLIN + lamparredo + SKILLMAX + SOMEC TSI) MESTIERI

PRODUCTION MONITORING

A structured methodology guides every project through its entire lifecycle, with a single point of accountability across the entire delivery chain. This approach keeps design intent, material choices, and quality standards aligned from start to finish.

Process continuity also makes it possible to identify the most effective solutions at every stage, adapt timelines and resources as needed, and maintain quality throughout execution.
Long after completion, the same commitment continues through dedicated service, updates, and ongoing support.
A method built to last, just like the spaces it creates.

Where others see constraints, we see a project waiting to happen. It's our ability to *solve challenges creatively*, seeing beyond what exists today to imagine what a space can become

Project Management

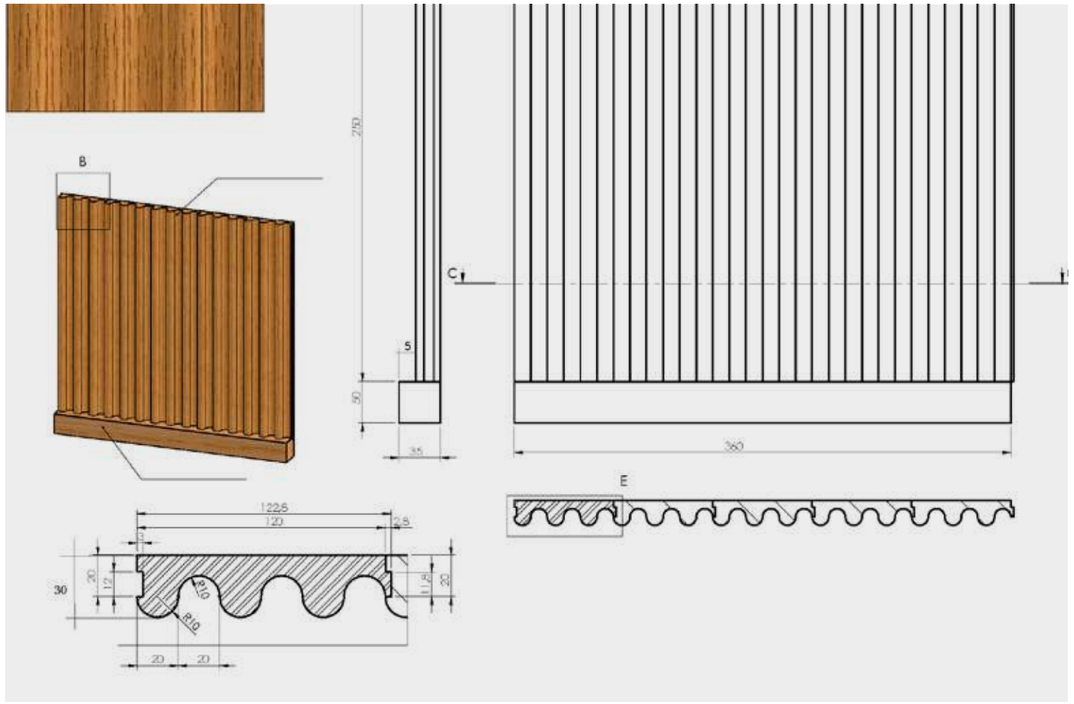

Every project takes shape long before work begins.
From Scope Review to operational planning, Mestieri establishes the framework that aligns vision, timelines, and resources. Across both land-based and marine projects, the approach is tailored to the specific nature of the work, whether new construction, renovation, newbuild, or refit.

Potential challenges are addressed early through structured risk management and close coordination, keeping every stage of the project aligned with its objectives. Progress is tracked continuously, with action plans adjusted in real time to keep the project on course.

Design Assist

Every project is ultimately tested against real-world requirements: materials, budgets, and technical feasibility. In the early design stages, Mestieri works alongside the design team as an active partner, helping transform concepts into practical solutions through specialized consulting, design analysis, and budget feasibility assessments.

Materials are selected, sampled, and evaluated throughout the design process to ensure the finished result reflects the original vision. Full-scale mockups, supported by technical drawings and renderings, make it possible to assess proportions, finishes, and construction details before production begins.

Value Engineering & Design Execution

The next phase turns the design into a fully defined production system. Shop drawings and structural calculations establish every execution detail, while technical specifications and material takeoffs provide the foundation for accurate and efficient production planning.

Mockup area

Through the creation of precision-built prototypes, the technical solutions developed in the design phase are tested in their real-world applicability, giving clients a tangible sense of the work long before production begins.

The project acquires a new layer of refinement as construction quality is verified, finishes are confirmed, and design choices are validated. As the work moves from the virtual to the physical, any potential issues surface early and can be addressed with targeted adjustments, minimizing the risk of unexpected issues during execution.

Crafted beauty: An uncompromisingly tailored approach that unites artisanal mastery with cutting-edge technology

Craftsmanship and cutting-edge technological capabilities

The quality of a tailored interior depends on the quality of the people and processes behind it. Mestieri operates on two complementary levels: an in-house manufacturing network made up of the Group's companies, and an ecosystem of external partners selected for their expertise, reliability, and ability to expand the range of materials and processes available to each project.

This approach provides flexibility without sacrificing control. From contract negotiations to production quality management, every stage is managed with the same level of oversight and attention to detail.

The Group's Manufacturing Expertise

Mestieri's tailored interiors are made possible by the expertise of four manufacturing companies within the Group, each specializing in a distinct craft: wood, metal, and stone.

Together, they form an integrated manufacturing platform that ensures direct quality control, continuity from design through execution, and the precision required by complex high-end commissions.

Wood
Combining specialized woodworking expertise with mastery across multiple materials, Skillmax produces wood furnishings and finishes through an integrated in-house manufacturing process encompassing carpentry, assembly, and finishing, supported by a catalog of more than 3,000 continuously updated finishes.

Metal
Lamparredo and Ceolin specialize in custom metalwork, creating structures, furnishings, accessories and decorative features with distinctive finishes in stainless steel, brass, and bronze for projects of any scale.

Stone
Budri specializes in the custom fabrication of marble, onyx, and semi-precious stone. In partnership with international designers, the company creates bespoke architectural surfaces, furnishings and decorative elements. By combining artisanal craftsmanship with advanced technology, it brings exceptional creative freedom to the use of natural stone.

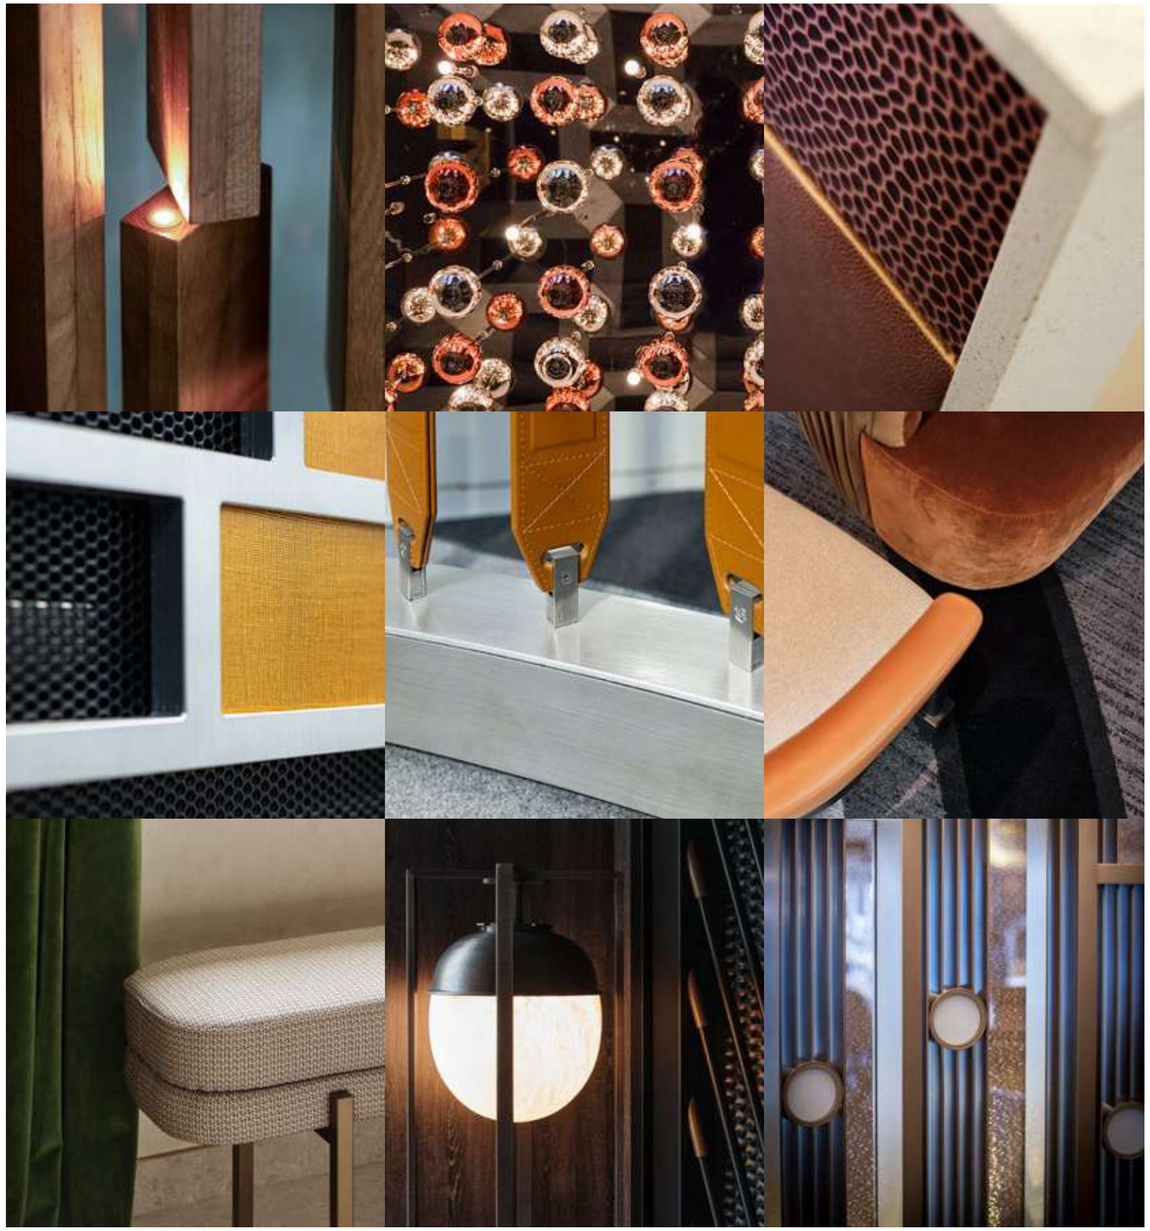

A Network of Selected Partners for Integrated Turnkey Projects

Alongside its in-house manufacturing capabilities, Mestieri works with a carefully selected network of Italian manufacturing partners known for their technical excellence and held to the same quality standards as its own operations. Built on long-term collaboration, this network expands the Group's capabilities to meet virtually any project requirement, from fully integrated turnkey environments, to the most demanding custom projects.

For clients, the benefits are straightforward: access to a broader range of materials and manufacturing techniques, a single point of accountability across the entire project chain, reliable lead times even during peak production periods, and the flexibility to manage projects of varying scale and complexity.

Every installation delivers on a promise. *From design to site,* on land and at sea, we carry precision through to the final detail

Certified Installation

Installation is where the project becomes reality, and where quality is ultimately judged. Mestieri relies on specialized installation teams, both in-house and external, backed by ongoing training and dedicated technical oversight to deliver the same level of precision envisioned during the design phase. Materials, deliveries, and on-site installation are carefully coordinated so that everything arrives where it's needed, when it's needed.

Regular inspections and ongoing oversight help maintain control of a complex process, keeping safety, quality, and schedule performance aligned throughout the project.

Commissioning

A project's closeout requires the same level of attention as its launch. Mestieri manages commissioning through a structured process that includes document archiving, internal pre-punch reviews to identify issues early and enable prompt corrective action, management of the official punch list, and final inspections before handover.

Clients receive sample books and all required technical documentation, including marine certification documents, ensuring a complete, fully documented, and traceable transition from project delivery to long-term operation.

After-Sales & Restyling

The relationship with the client extends well beyond project completion. Mestieri provides ongoing technical support through dedicated warranty and maintenance services designed to preserve the quality and performance of completed interiors over time.

Even the most successful spaces evolve as needs, expectations, and tastes change. Mestieri helps clients refresh existing interiors through updated color palettes, renewed furnishings, and updated finishes, while preserving as much of the original environment as possible.

Rather than a structural renovation, it is a targeted design refresh that gives a space renewed relevance and a contemporary feel.

Each step is measured, evaluated, and refined: *Continuous monitoring* is our guarantee of precision

Testing & Production Monitoring

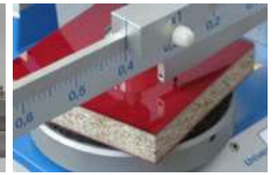

At each phase, the digital model is measured against the built reality to ensure complete alignment between design intent, execution and installation.

Surveys and precise measurements provide reliable data throughout the process, making it possible to detect deviations early and intervene with timely adjustments.

This ongoing monitoring keeps the entire process under control, helps optimize time and resources, and provides accurate data to support technical decisions at every stage.

On Land

Boutique & Retail

Mestieri's retail environments translate a maison's identity into a cohesive spatial language, one that can be replicated across multiple locations worldwide while maintaining the same standards of quality and execution.

Every finish and every detail is carefully calibrated to remain distinctive and tailored, even as the project is rolled out across multiple locations.

→
Printemps New York, where fashion, design, hospitality, and culture come together under one roof across more than 450 brands.

Designed by French architect and designer Laura Gonzalez, the 5,000-square-meter space blends the building's original Art Deco character with the contemporary luxury and elegance of a Parisian apartment. Mestieri coordinated the work of Italian artisans from Budri, Lamparredo and Ceolin throughout the store's distinctive themed spaces.

In the Salon at Printemps New York, three large wrought-iron gazebos are adorned with more than 1,000 individually handcrafted leaves created by the artisans of Ceolin.

A striking decorative feature, they transform craftsmanship into a design language that resonates with the space's Art Deco character.

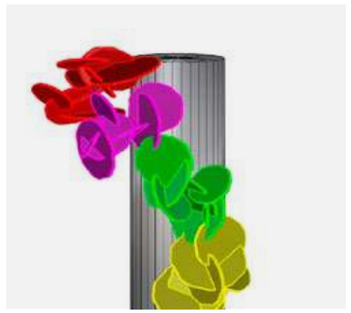

↓
For Patricia Urquiola’s Louis Vuitton installation at Design Miami, Mestieri contributed to the creation of a desert-inspired landscape based on the forms of the Desert Rose, where mineral and organic elements, hard and soft, coexist. Dunes, walls, and columns share the same peach-toned granular texture, achieved by blending cork dust into the paint.

Developed in 3D and fabricated from fully painted lightweight foam, the structures were assembled in-house, then disassembled, coded, and packed component by component for shipment.

→
The Pink Closet is an exclusive boutique designed by architect Celestino Cristina at Palazzo Avino in Ravello. Fine leathers, crafted brass, and refined surfaces create an atmosphere that is both sophisticated and warm.

Lighting effects, rich material textures, and the visual continuity of the custom furnishings give the space a distinctive identity, while the marble surfaces created in collaboration with Budri add depth and character through unique detailing. Premium materials and bespoke design give the boutique a strong sense of identity while remaining true to the refined character of the hotel.

↑
The Jimmy Choo store at Westfield London pairs contemporary elegance with carefully considered detailing to elevate both the product and the customer experience.

Niche furnishings play with transparency and reflection through wall-suspended mirrored backdrops, while display structures finished in brushed brass-effect coatings and topped with Calacatta Rosa marble shelves add richness and material depth throughout the space.

→
Missoni, New York. Clean lines, refined materials, and statement details define the Missoni store in New York. An oval table with semi-circular metallic-finish legs and extra-clear glass shelving is paired with a minimalist feature wall incorporating concealed hanging systems and integrated LED lighting, creating a space that balances visual lightness with contemporary sophistication.

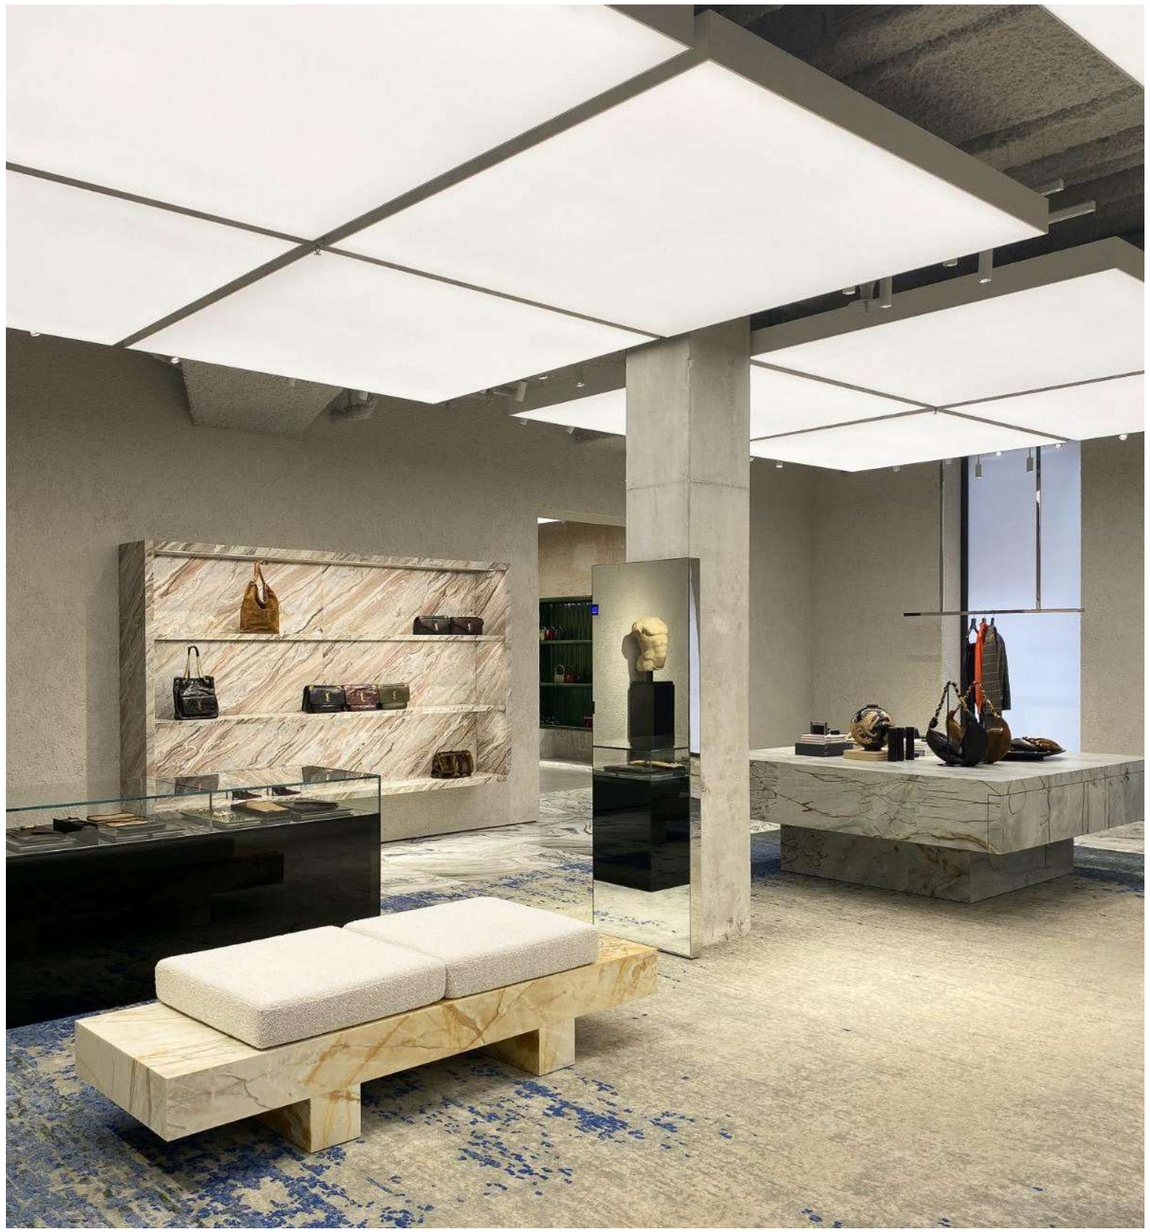

←
For Serapian – at Villa Serapian Ginza in Tokyo – Mestieri, through Budri, created marble and semiprecious stone furnishings and design pieces that seamlessly blend craftsmanship, contemporary design, and Italian excellence.

→
For the Saint Laurent flagship on Avenue Montaigne in Paris, Mestieri, through Budri, crafted custom displays, showcases, and niches in premium marbles, including Giallo Siena, Confusion Red and Invisible Blue, perfectly aligned with the Maison's architectural elegance.

Hospitality & Public Spaces

Mestieri designs hospitality and public spaces as cohesive environments, creating a consistent experience from lobby and guest rooms to restaurants and shared amenities.

Many projects involve historic and high-profile properties, where renovation means balancing respect for the original architecture with a fresh perspective, delivered through fully custom interiors and turnkey solutions.

→
At Bulgari Hotel Roma, hospitality meets Italian craftsmanship. Walnut paneling and intricate inlays clad corridors and ceilings, while the restaurant features coffered detailing and curved brass and wood screens, all crafted entirely by hand.

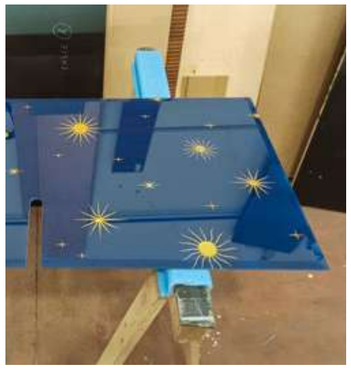

The Excelsior, a Luxury Collection Hotel, Florence. With sweeping views of Florence, the Cosimo Rooftop Restaurant & Bar combines bespoke furnishings and cladding in a setting that feels both elegant and distinctly Florentine.

Custom counters with solid-wood inlays and tubular brass bottle displays define the space, while London-inspired decorative glass lends the back bar a subtle starry-sky effect.

The Donatello bar, clad in natural stone, is paired with the Lo Scoglio bar back fabricated from lightweight materials and hand finished to faithfully replicate the look of stone. A dramatic burnished brass bottle display, complete with custom glass shelving and LED lighting, anchors the space.

In the Library & Relax area, niches rising more than four meters are accented with wallpaper, solid-wood spiral moldings, and burnished brass profiles. Extra tall leather-clad doors, a hand-decorated mirrored ceiling, and custom banquettes finished with brass-mesh detailing and leather upholstery complete an interior where craftsmanship and refinement are evident at every turn.

For Nolinski Venice, Mestieri designed and produced many of the hotel's signature furnishings and interior features, from guest rooms to public areas. Guest rooms feature metal and glass furnishings, vanity units and shower enclosures in forged steel and natural brass, natural brass sliding doors, aluminum tables and chairs, and, custom headboard mirrors incorporating the Nolinski logo.

In the public areas, the third-floor Bar Library combines natural brass cladding and accents with steel and glass shelving, and integrated back lighting, set against a sculpted historic wall. On the ground floor, the Café is finished entirely in brushed steel, with custom doors and finely crafted details throughout.

Additional features include forged steel cladding along the pool stairwell, polished stainless steel counters and display cases in the spa, motorized access doors for the restaurant kitchens, and burnished brass wayfinding signage throughout the hotel.

←
Principessa Hotel, Forte dei Marmi.
Curved fluted glass partitions framed in burnished brass create layers of transparency and reflection throughout the space. Fitted niches combine light wood cabinetry with travertine surfaces, while integrated LED lighting highlights the texture and depth of the materials.

A suspended burnished brass structure with art glass pendants gives the space its distinctive character, while recessed marble shelving echoes the surrounding architecture.

At the heart of the space, a fully marble-clad reception desk sits beneath a structure of burnished brass tubing and fluted glass inserts. A contemporary luxury interior defined by the careful balance of brass, glass, and travertine.

→
Marriott Duo Hotel Milano.
Guest room and public area renovation.
For the hotel, formerly known as Four Points by Sheraton, a six-month renovation refreshed both the look and functionality of the property while maintaining four-star hospitality standards and full hotel operations throughout the project.

The work encompassed more than 100 guest rooms as well as key public areas, including the reception, lounge, cocktail bar, and restaurants.
Custom furnishings, decorative wall treatments, reception elements, and service counters in laminated wood and painted metal were supplied as part of the renovation.

Palazzo Avino, perched above the Amalfi Coast among cobbled lanes and citrus groves.
For the suites, Mestieri created fully custom furnishings that combine fine wood, handcrafted ceramics, antiqued mirrors, and luxurious textiles, reflecting the beauty and character of the surrounding landscape.

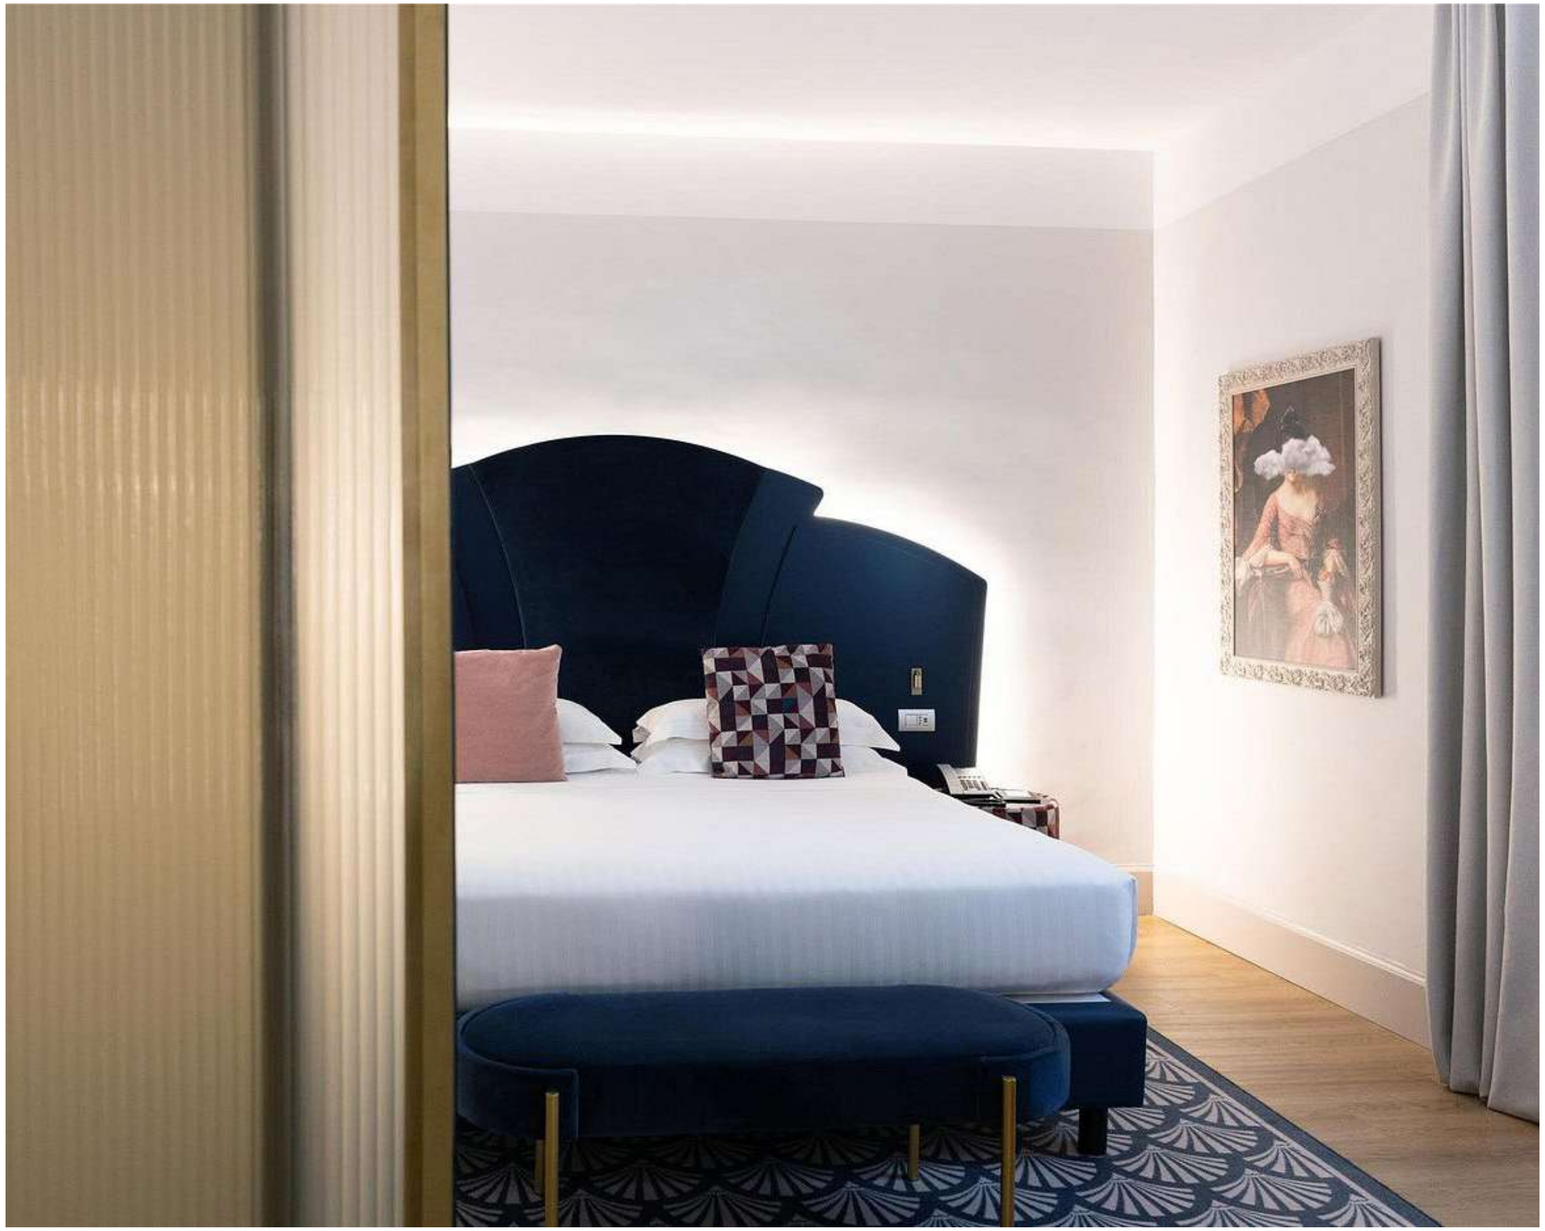

→
On the seventh floor of Armani Hotel Milano, the Armani/Bamboo Bar, named Best Hotel Bar 2025 by Forbes Travel Guide, opens onto sweeping views of the city.

Bespoke furnishings and finishes translate the brand's signature minimalist aesthetic into and exclusive and distinctly contemporary setting.

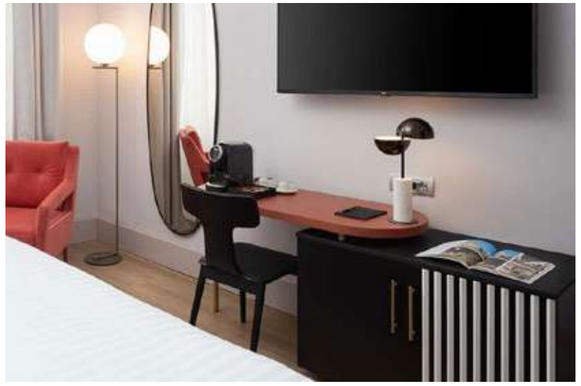

At the Anglo American Hotel Florence, Curio Collection by Hilton: custom guest room furnishings include headboards, multifunctional consoles, and vanity units that combine elegance, comfort, and functionality.

The headboards pair a lacquered wood center panel with upholstered fabric side panels, while integrated Flex LED lighting creates a warm and inviting atmosphere.

The consoles, complete with integrated minibars, combine white lacquered profiles, lacquered doors, and oval laminate tops supported by brass-effect metal tubing, creating depth and visual contrast.

The vanity units feature moisture-resistant materials and softly curved forms, bringing together durability and contemporary design in a cohesive collection of exclusive furnishings.

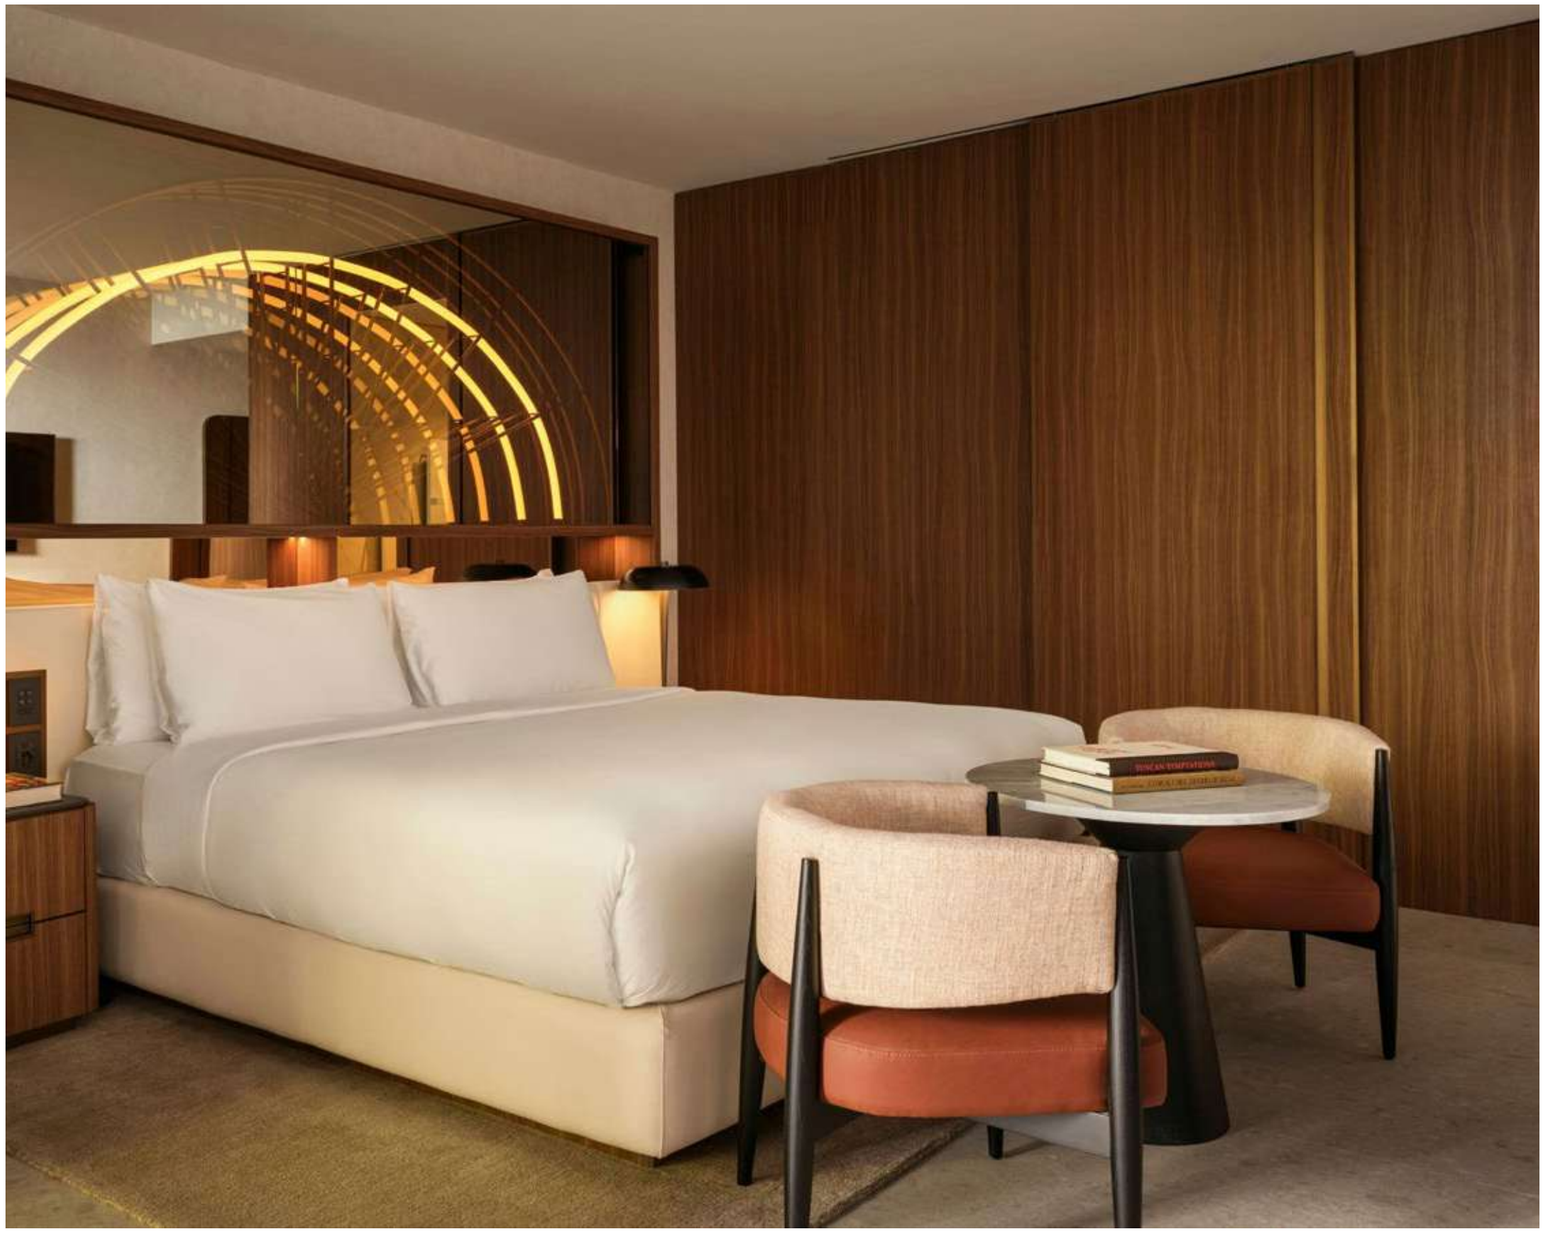

For W Florence: furnishings and accent pieces for the hotel's interiors. Two lounge chair designs feature enveloping curves that create a sense of comfort and privacy. The first has a cylindrical base upholstered in black leather and a wraparound backrest in a black and white geometric fabric with a striking graphic presence.

The second pairs matte-black turned legs with a brown leather seat and a light Oxford fabric backrest, creating a warm and sophisticated contrast of textures.

The collection is complemented by occasional tables, with black lacquered solid wood bases and round marble tops.

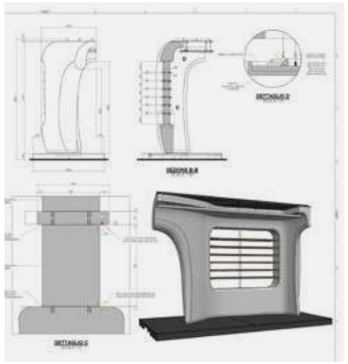

Ray-Ban House in SoHo, New York, was conceived as a hybrid between retail space and event lounge, creating a fluid, immersive environment nicknamed the “Bubble” for its soft rounded forms.

Built from lightweight materials with a metallic finish, the structure was assembled in-house using full-scale templates to ensure precision, then shipped and installed on site.
Final filling and finishing eliminated visible joints, creating the appearance of a single monolithic volume.

Curved mirrored niches expand the sense of space, while a mirrored ceiling enhances light and depth.
A custom three-dimensional bar, chrome finish tables with glass tops, and audio systems integrated into the furnishings reinforce the space’s immersive character.

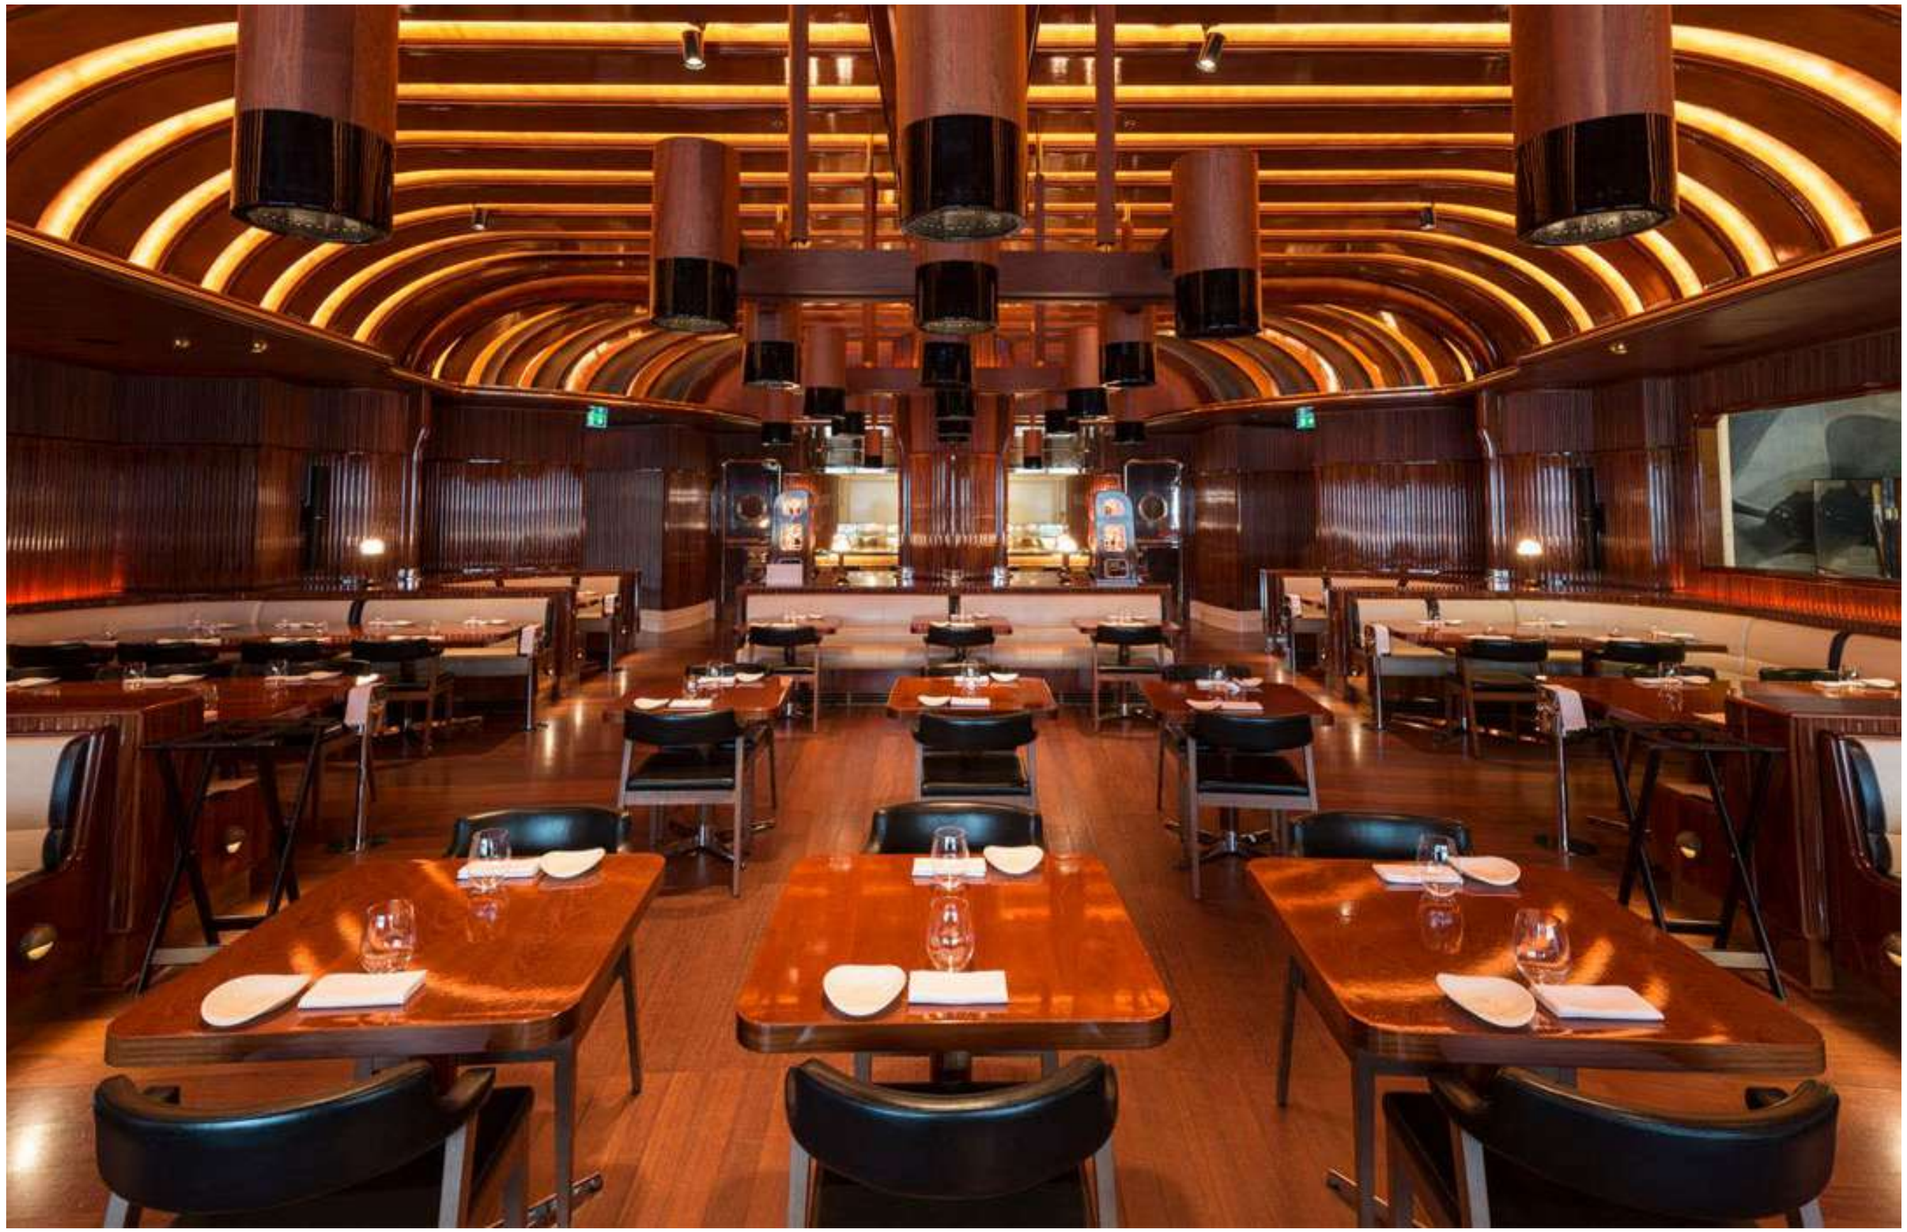

Replay restaurant in Milan is an exclusive, wood-clad space where every surface is designed to work as part of a cohesive whole. Inspired by the elegance of a luxury yacht, the project uses high-gloss mahogany to bring out the natural beauty of the wood grain.

A curved ceiling, inspired by the ribs of a yacht, gives the space its distinctive identity. More than a stylistic feature, it creates an intimate, immersive setting that transforms the dining experience.

↑
Opened in 2025 and designed to accommodate up to 36,000 passengers per day, the Miami cruise terminal is the largest in the world.
Through TSI, Mestieri, produced handcrafted wood finishes for the terminal's premium spaces, including VIP lounges, check-in areas, and spaces dedicated to MSC Cruises.
The project also included 12,000 square meters of acoustic panels designed to echo the movement of ocean waves.

→
Doha International Airport, Qatar.
In collaboration with Milan's ACPV Architects Antonio Citterio Patricia Viel, Mestieri produced custom furnishings for key public areas of the airport.
Materials included teak, Canaletto walnut, premium leather wall paneling, brass, and specially finished steel.
Close coordination between design, engineering, and production teams ensured that custom materials and finishes were delivered to the highest quality standards.

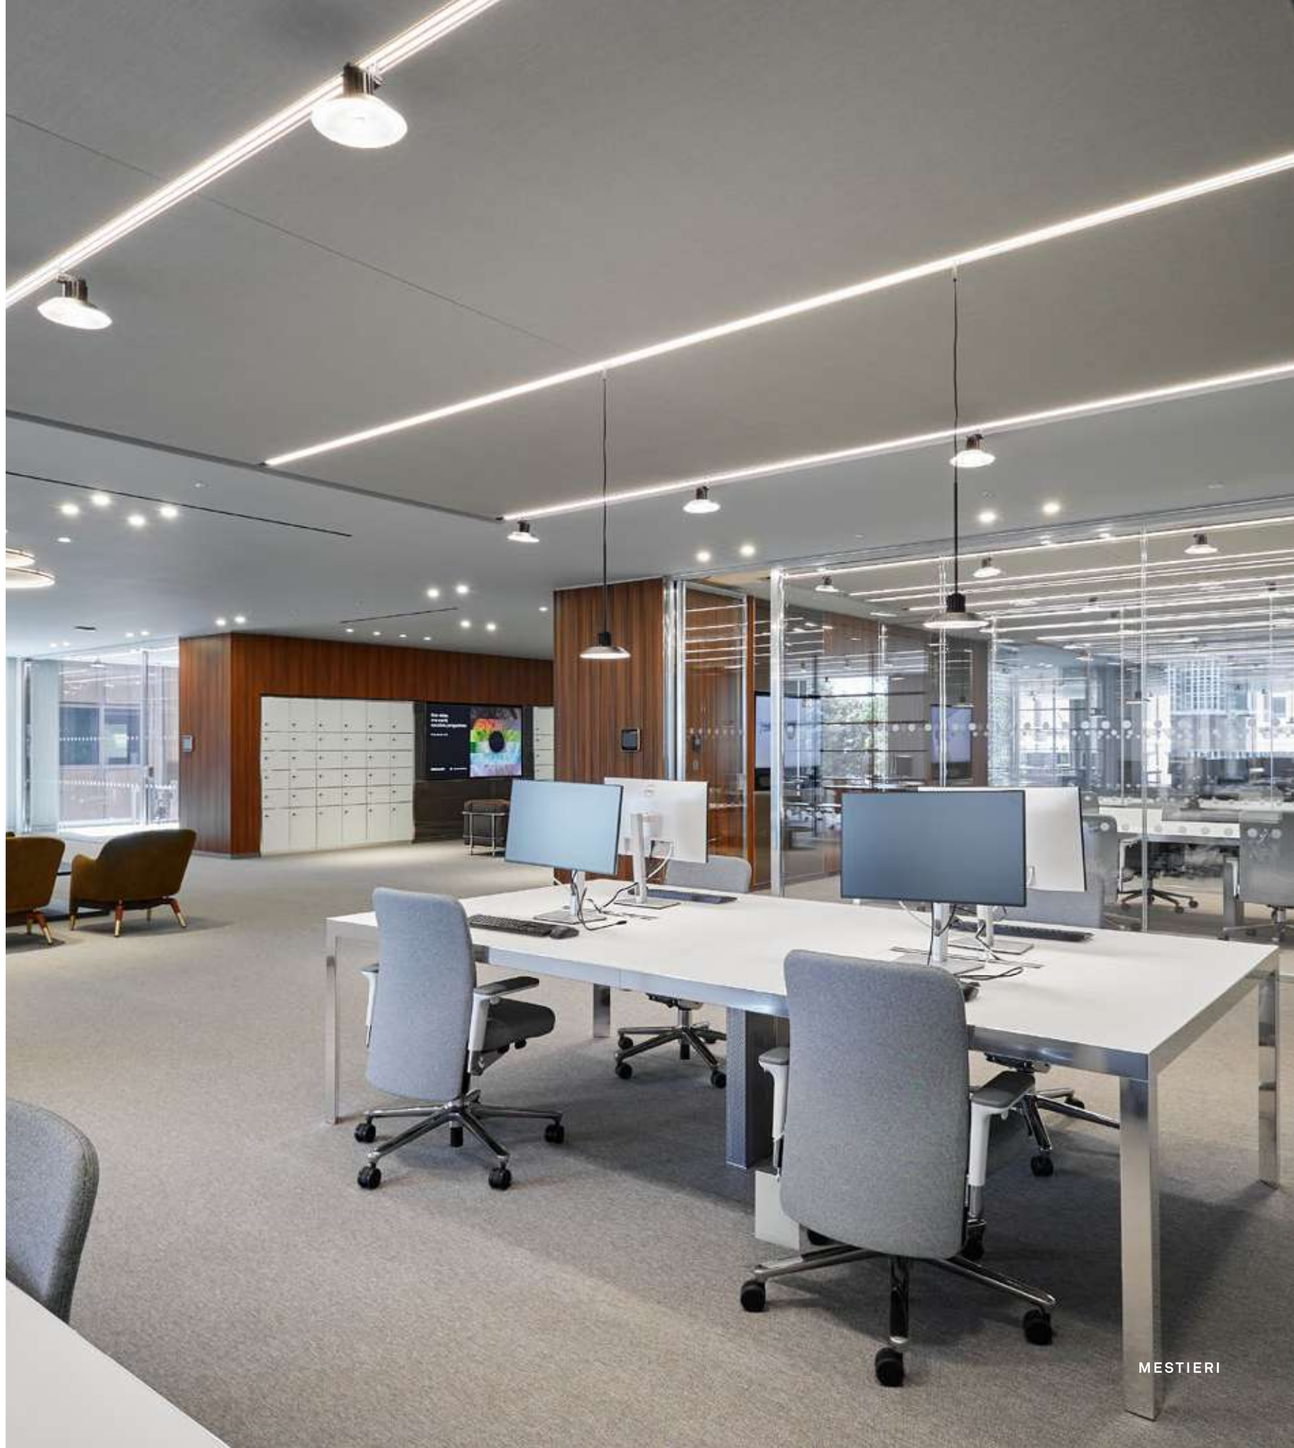

Workspaces

Mestieri creates workplace environments tailored to the needs of corporate organizations and executive headquarters, where collaborative areas and spaces for focused work coexist within the same space.

Technology, acoustic comfort, and certification requirements are integrated into workplaces that reflect the culture and identity of the organization.

→
At EssilorLuxottica's headquarters in Kensington, London, a 2,800 square meter fit-out introduced extensive architectural millwork and fully custom furnishings throughout the executive offices.

The project included approximately 500 square meters of bespoke millwork, including full-height veneered wall panels, integrated storage, fitted feature walls, and specialty cladding, all designed to integrate seamlessly with building systems and workplace technology.

Conceived as a multifunctional space, the break area centers on a custom feature piece with integrated storage, dark finishes, and continuous surfaces that reflect the brand's international character.

Custom millwork, a bespoke reception desk, and detailing in fine materials give the main reception area a distinctive elegance.

The project also included custom furnishings for meeting rooms and shared spaces, from executive boardrooms with bespoke tables and integrated audiovisual systems to informal lounge areas and built-in niches.

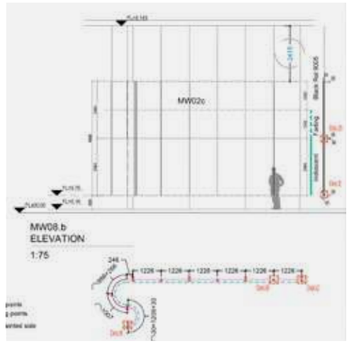

←
For Huawei's Rome headquarters, custom furnishings were developed around the architectural language of the space, integrating wood finishes directly into the building's columns.

The project includes custom tables, benches, and display elements designed to create aesthetic and functional continuity throughout the interior. Custom cladding transforms the drywall columns into architectural features that become an integral part of the furnishing system.

↓
BMW Showroom in Munich.
Inspired by the lightness and elegance of a suspended drape, the installation features expanded metal mounted on a framed structure and finished with an iridescent gradient coating that fades from top to bottom, creating shifting reflections and plays of light.

Suspended from the ceiling by steel cables and hangers, the structure appears almost weightless, introducing movement and lightness to the space. Its sculptural presence echoes the innovation, technology, and elegance associated with the BMW brand.

Museums

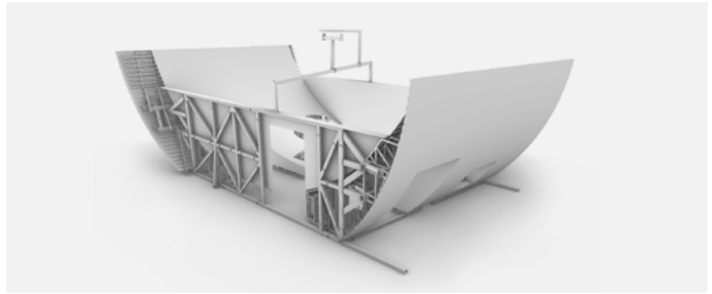

Mestieri’s museum and cultural projects bring together exhibition design and conservation, developed in close collaboration with preservation authorities and heritage organizations.
Whether creating new installations or working within existing museums, every project is designed around the collection itself, meeting rigorous requirements for climate control, security, and technical lighting.

Many projects take place within historic buildings, where the architecture, established visitor routes, and the need to remain open to the public must be all be taken into account. Meeting these challenges requires technical expertise and a deep understanding of context.

→
Musée National de la Marine, Palais de Chaillot, Paris. One of the largest museum exhibition projects ever undertaken in France, the Musée National de la Marine was designed by the British exhibition design studio Casson Mann.

Through Lamparredo, Mestieri contributed to the exhibition design, creating custom display cases and immersive installations that explore the history of the French Navy and the art of navigation.

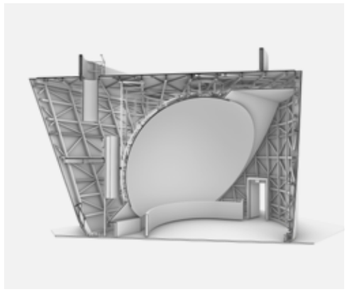

Dedicated to storms and shipwrecks, La Vague is an immersive gallery dominated by a monumental wave. Video and sound projections recreate the experience of a storm at sea alongside large-scale paintings depicting maritime disasters.

Lamparredo fabricated the wave itself: a steel structure 20 meters long, approximately 12 meters wide, and 8 meters high, assembled on site and sheathed in drywall. Its form and surfaces were specifically developed to support multimedia content and create a multisensory visitor experience.

At the entrance to the exhibition stands La Coque de Bateau, a black monolith reproducing the bow of an ocean liner at full scale. Through Lamparredo, Mestieri fabricated the structure as an approximately 8-meter-high steel framework finished in drywall and installed within a gallery measuring 12 meters in height.

Inside, a film is projected onto a hemispherical screen seven meters in diameter that towers above visitors, offering multiple perspectives on the story being told.

It was the most complex element of the exhibition. Positioned right next to the protected historic structure, the installation required two years of design development.

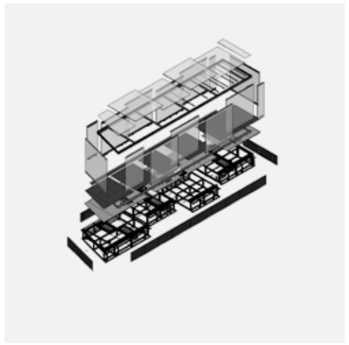

The museum's display cases are among its most distinctive features.

Large transparent volumes appear to float in the darkness, housing everything from ships in bottles to large-scale training models.

Originally conceived as a response to the building's technical constraints, which required objects to be displayed in enclosed cases due to the absence of mechanical ventilation, they have become one of the defining features of the permanent exhibition.

For the central vitrines, the corner supports were removed and an additional steel structure added to the wall-mounted system, encouraging visitors to view the collection from different angles and engage more closely with the models on display.

↓
Terra Sancta Museum, Jerusalem. Within the Franciscan Convent of the Flagellation in Jerusalem, Mestieri, through Lamparredo, helped deliver a museum dedicated to preserving the archaeological and artistic heritage of Christianity.

Metal cladding, display cases, and architectural glazing, were custom designed to preserve the visibility of the historic masonry while discreetly concealing newer additions. The project also included custom metal supports for capitals, funerary urns, and stone artifacts, as well as graphics for interpretive panels and labels.

Every element was preassembled in the workshop before being installed on site in approximately two months.

→
Archaeological Museum of San Lorenzo, Cremona. This restoration project reconnects the site's monumental architecture with its archaeological collections through exhibition walls and carefully placed openings that bring natural light into the nave.

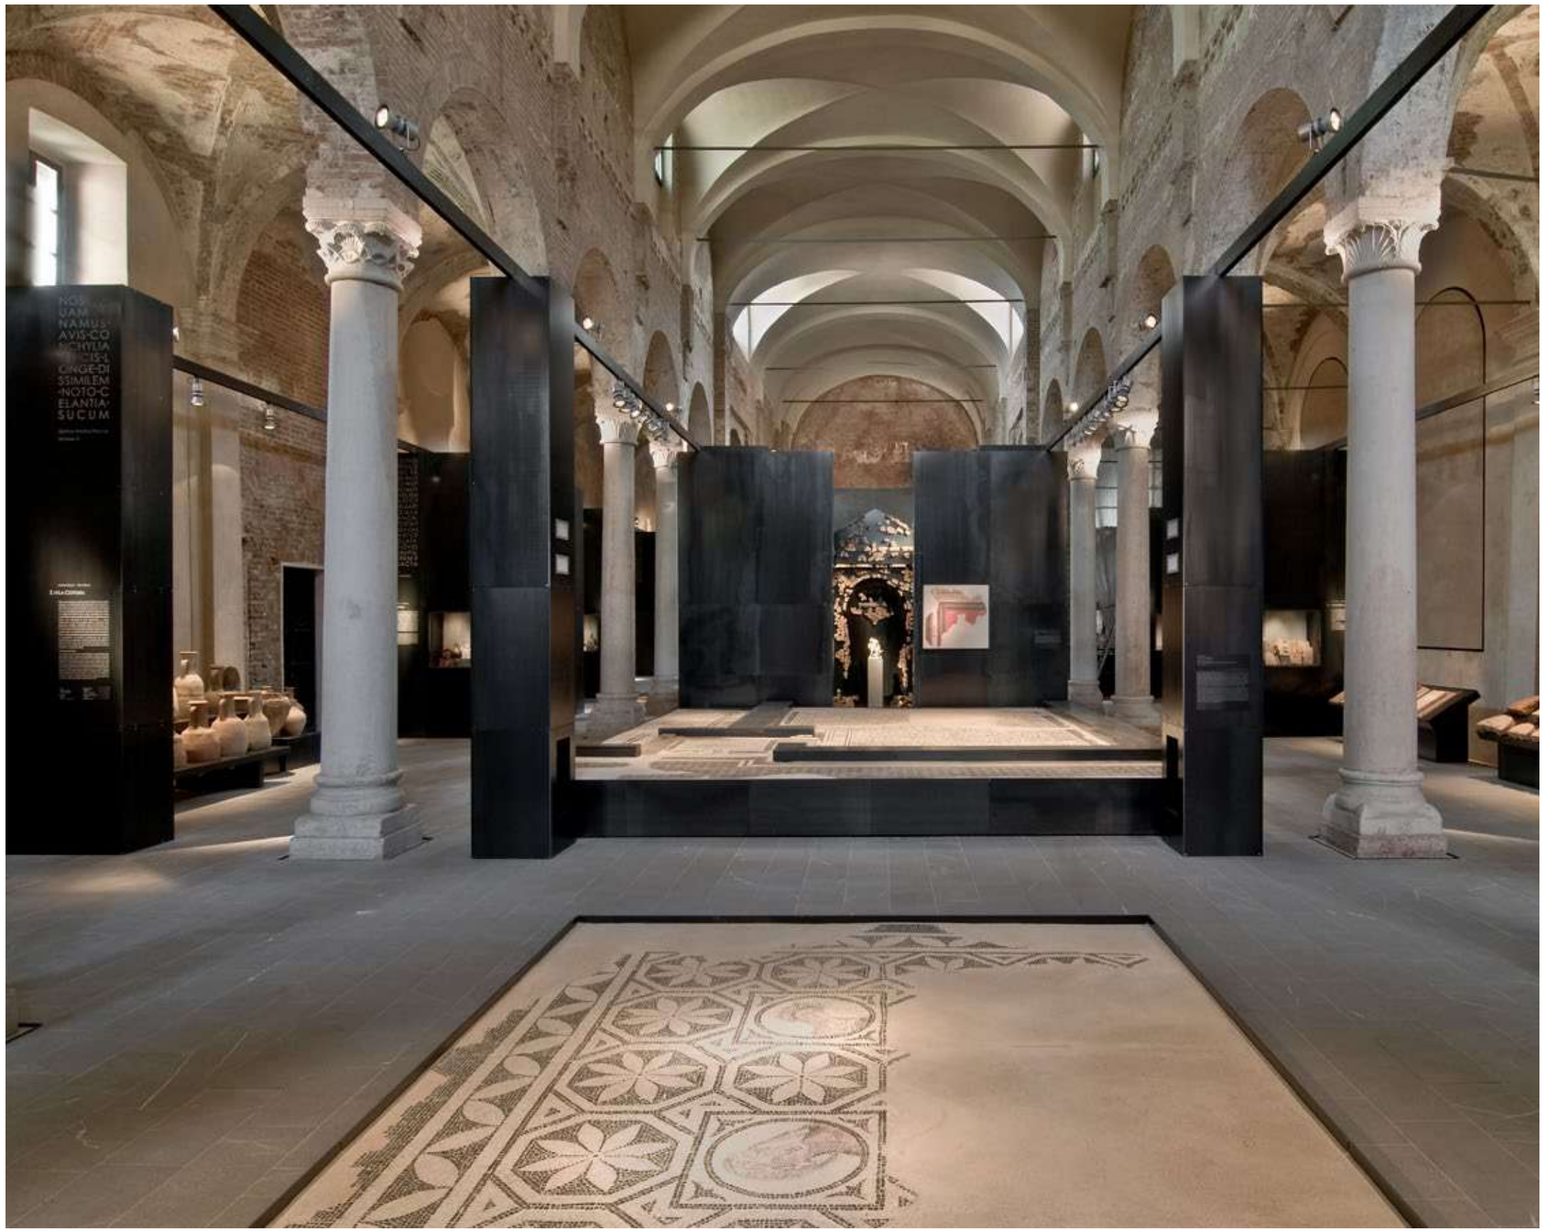

The project included exhibition walls, mosaic platforms, supports for the lighting system, and a full range of display elements, including recessed vitrines, lecterns, amphora supports, and display tables.

One of its most distinctive features is the setting created for the Nymphaeum. Here, the structure of a capital was reconstructed in metal and partially clad with original mosaic fragments, pairing a contemporary intervention with the historic fabric of the site.

At Sea

Restaurants

Restaurants are among the most prestigious spaces on board, where exceptional cuisine is complemented by interiors designed to enhance the overall dining experience.

Materials sourced from around the world are paired with Italian craftsmanship and premium finishes in environments engineered for long-term durability and reduced maintenance. These interiors are designed to remain impeccable cruise after cruise.

→
For the Crown Grill aboard Sun Princess, TSI created a refined interior tailored to an exclusive and elevated onboard dining experience.

Golden glass partitions, custom cladding, and bespoke finishes faithfully bring the design concept to life while meeting the demanding technical requirements of the cruise industry.

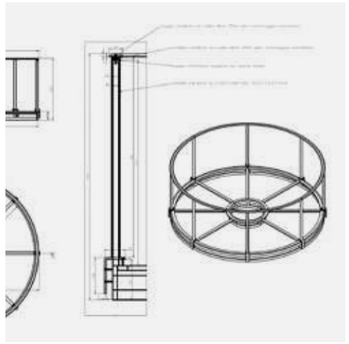

Elegant, cohesive, and meticulously detailed the space is designed for guest comfort at its core.

Inspired by the Hall of Mirrors at the Palace of Versailles, Le Bristro brings a timeless sense of elegance to Norwegian Cruise Line's Prima Class ships.

Inlaid marble, crystal chandeliers, and finely crafted plaster moldings create a richly detailed interior brought to life through the combined efforts of design, engineering, and manufacturing. Extensive prefabrication was complemented by specialist craftsmanship completed on board, ensuring that every detail was carried through exactly as designed.

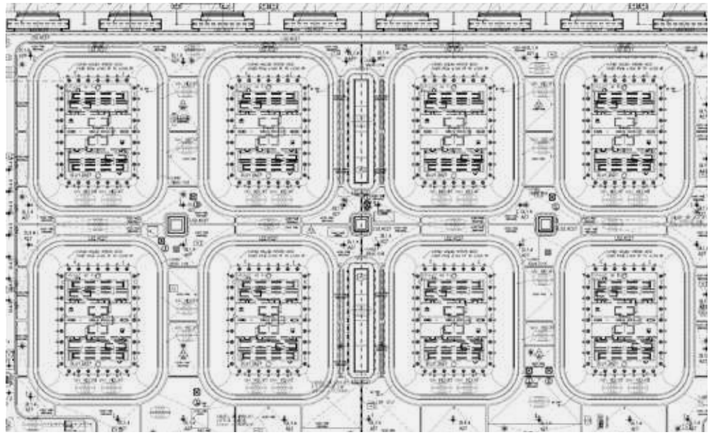

At The Local Grill restaurant, on Norwegian Cruise Line's Prima Class ships, the ceiling is the focal point of the entire space. Its complex three-dimensional structure, developed through detailed design, engineering, and prefabrication, transforms advanced technical solutions into a striking architectural feature.

Integrated lighting, designed to meet marine-industry standards, works together with bespoke furnishings and finishes to create an interior defined by innovation, craftsmanship, and precision.

At Teppanyaki, aboard Norwegian Cruise Line's Prima Class ships, guests dine beneath what feels like a work of art. The decorative hoods are more than functional elements. Crafted from carefully selected materials, they were prefabricated, hand-finished in the workshop, and completed, on board while at sea.

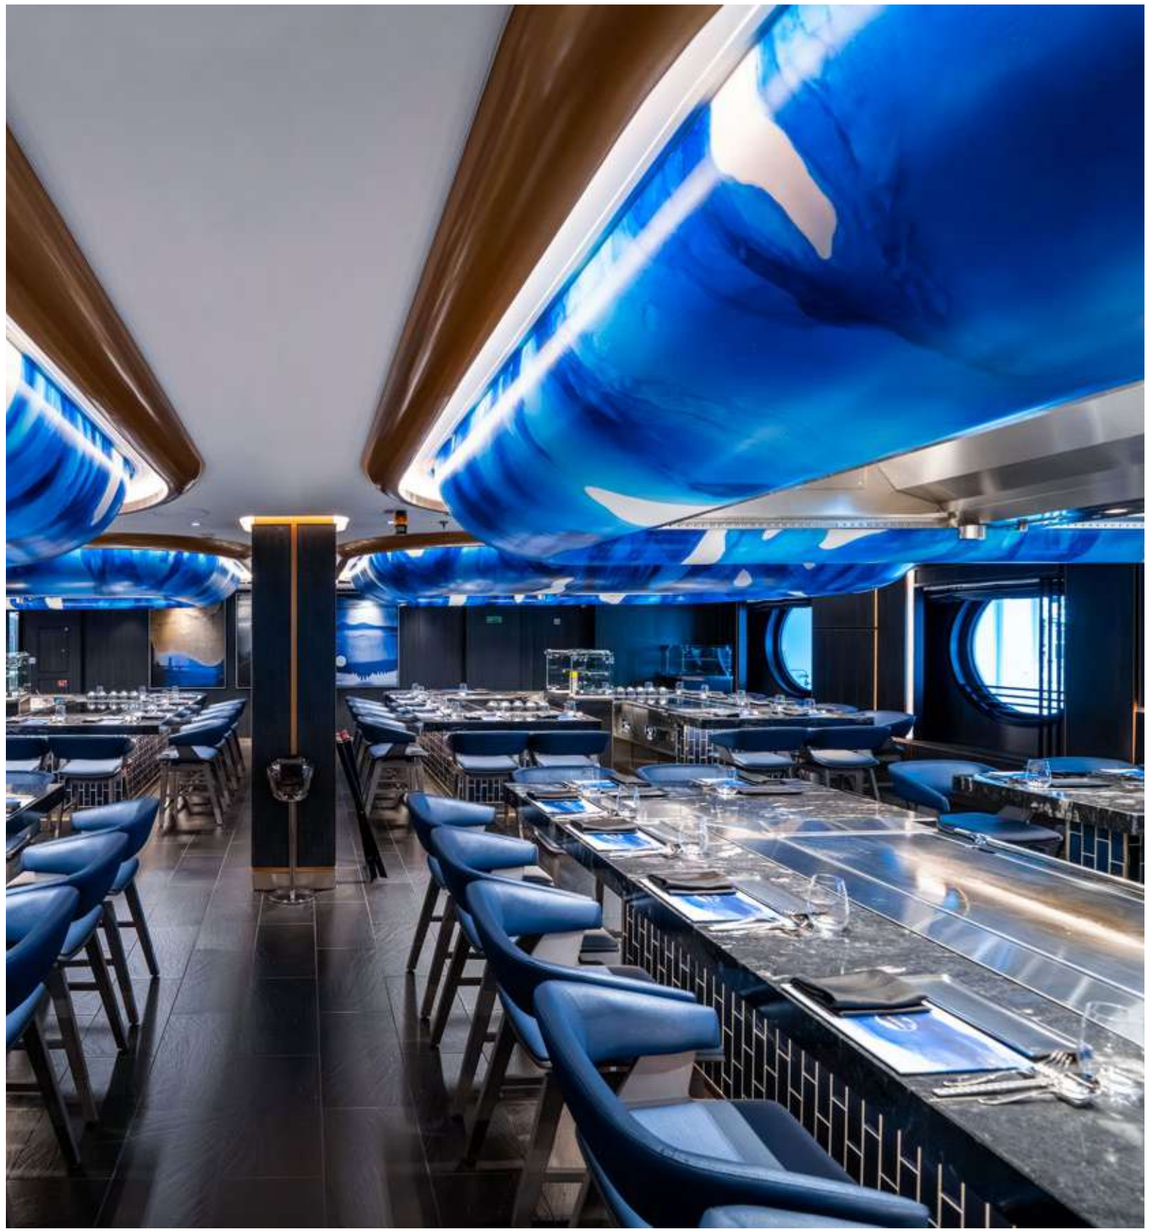

The project brings together design, artistry, and engineering, with every detail contributing to an experience unlike any other on board.

↓
The Grill by Thomas Keller brings the timeless elegance of classic transatlantic dining to Seabourn Quest through an interior rich in detail and craftsmanship.

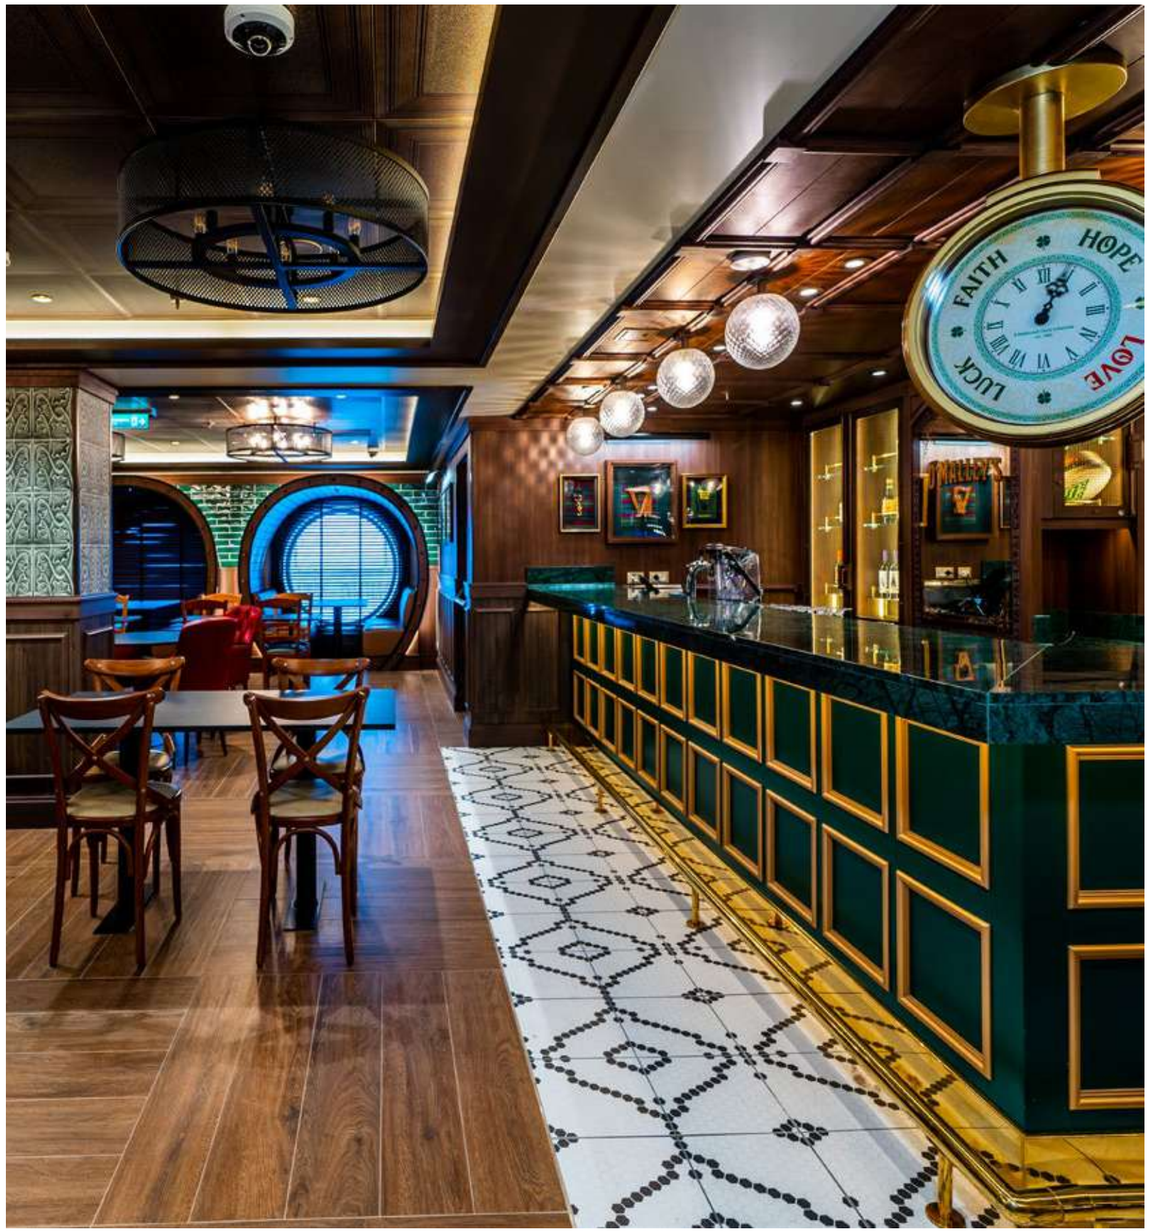

Materials sourced from around the world are transformed through Italian manufacturing expertise and custom fabrication.

The complex geometry of the ceilings, wall finishes, and upholstered elements required an extensive process of design, engineering, and integrated production, translating technical complexity into an interior that is refined, highly functional, and visually compelling.

→
O'Malley's Irish Pub, aboard Princess Cruises' Sphere Class Ships, recreates the character of a traditional Irish pub through the extensive use of natural and painted wood finishes.

Private rooms shaped like barrels, complete with stave-inspired detailing, extend the pub theme into the architecture itself, creating an inviting setting designed for socializing on board.

Bars & Lounges

From the first coffee of the morning to the last cocktail of the night, bars are among the busiest spaces on board. Every custom bar is the work of multiple trades, from woodworking to metal fabrication to finishing, all coordinated within a single project and delivered to the rigorous standards of the cruise industry.

Carefully selected materials, local craftsmanship, and premium finishes are supported by engineering solutions designed to simplify maintenance and support the day-to-day needs of both staff and guests.

→
The Metropolitan Bar aboard Norwegian Aqua combines a retro-inspired aesthetic with contemporary details, pairing 1970s-inspired patterns with a touch-responsive LED wall.

Marble selected for the beauty of its veining and precision-cut decorative wall panels are complemented by a striking semicircular glass ceiling embellished with high-clarity faceted crystals.

←
On Deck 7 of Norwegian Viva, the Metropolitan Bar offers a similarly sophisticated and cosmopolitan atmosphere, where sustainable cocktails and biodynamic wines are enjoyed against a backdrop of ocean views late into the night.

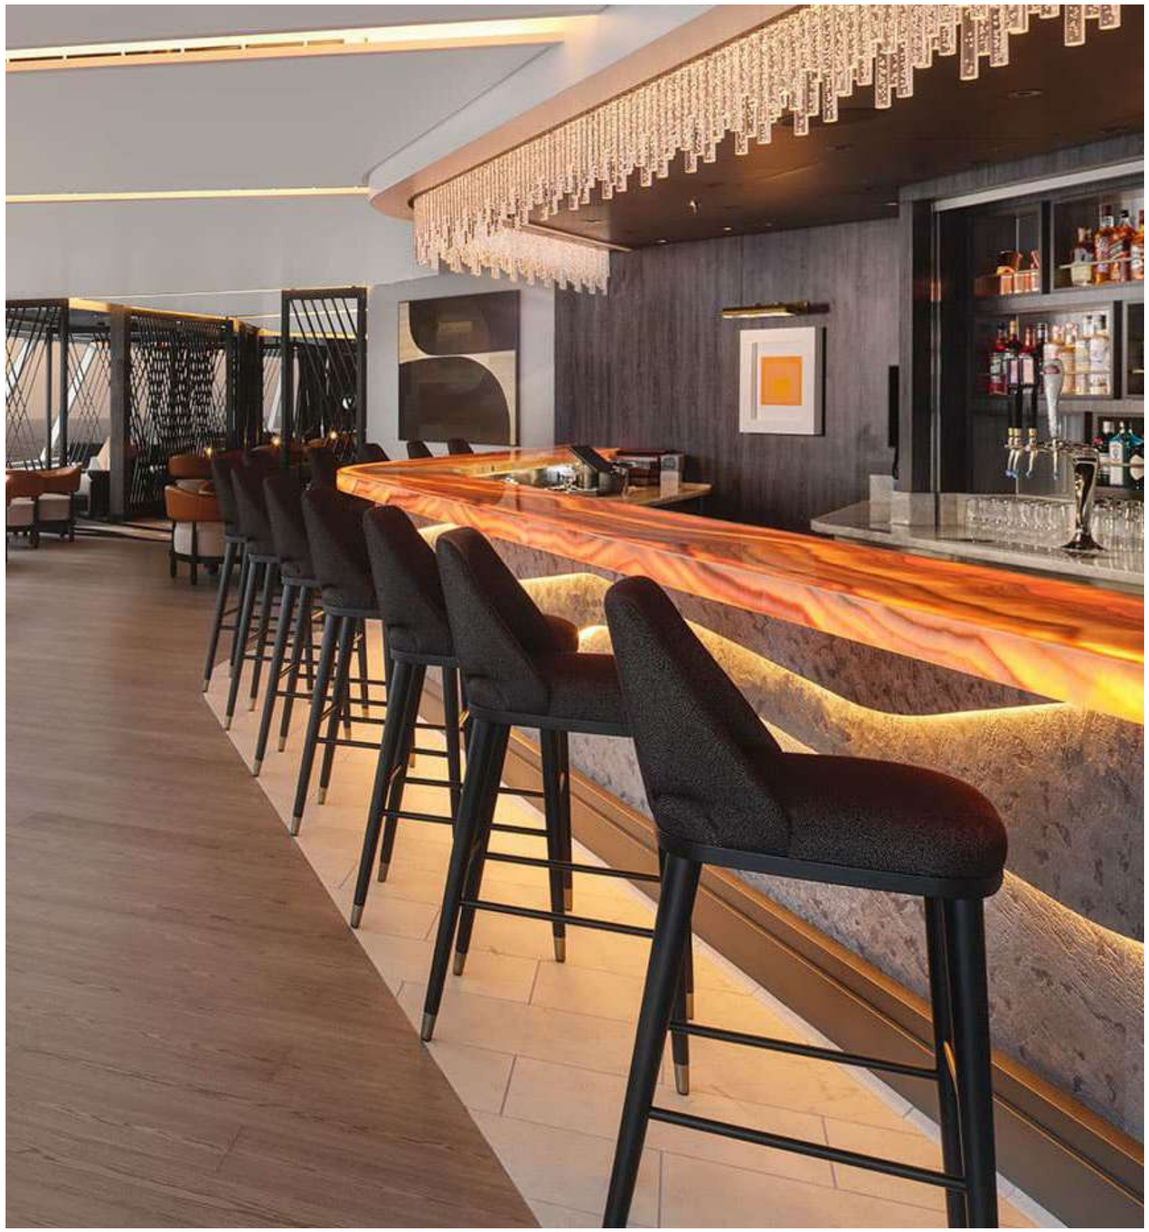

Marble chosen for the richness of its tones is paired with a prefabricated metal ceiling finished on site with stucco and paint creating a refined and highly crafted interior.

↓
The Living Room Café & Bar is one of the most recognizable spaces in The Ritz-Carlton Yacht Collection fleet.

It combines fine wood flooring, decorative glass partitions, and an expansive bar area within a carefully balanced palette of premium materials. Soft lighting and refined architectural detailing create an inviting setting throughout the space.

The Observation Lounge is one of the most popular gathering spaces aboard Norwegian Cruise Line's newest ships, including Prima, Viva, and Luna.

Expansive glazing brings the outdoors in, while elegant partitions and bespoke architectural features create intimate areas for relaxation and conversation.

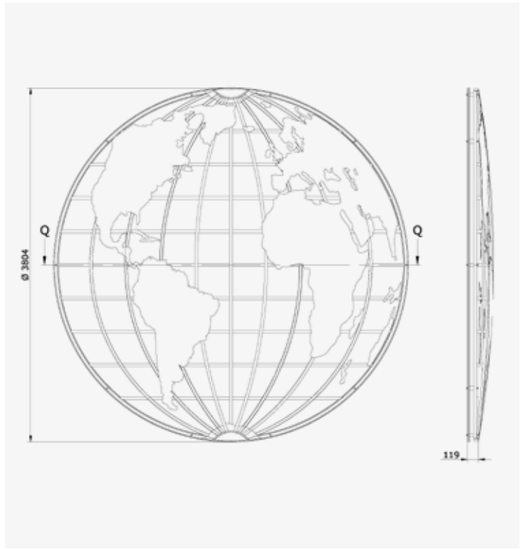

Metal-accented partitions reflect the attention to detail throughout the space, while the bar, with its backlit onyx surfaces and intricate custom fabrication, combines craftsmanship, innovation, and technical expertise in a single focal point.

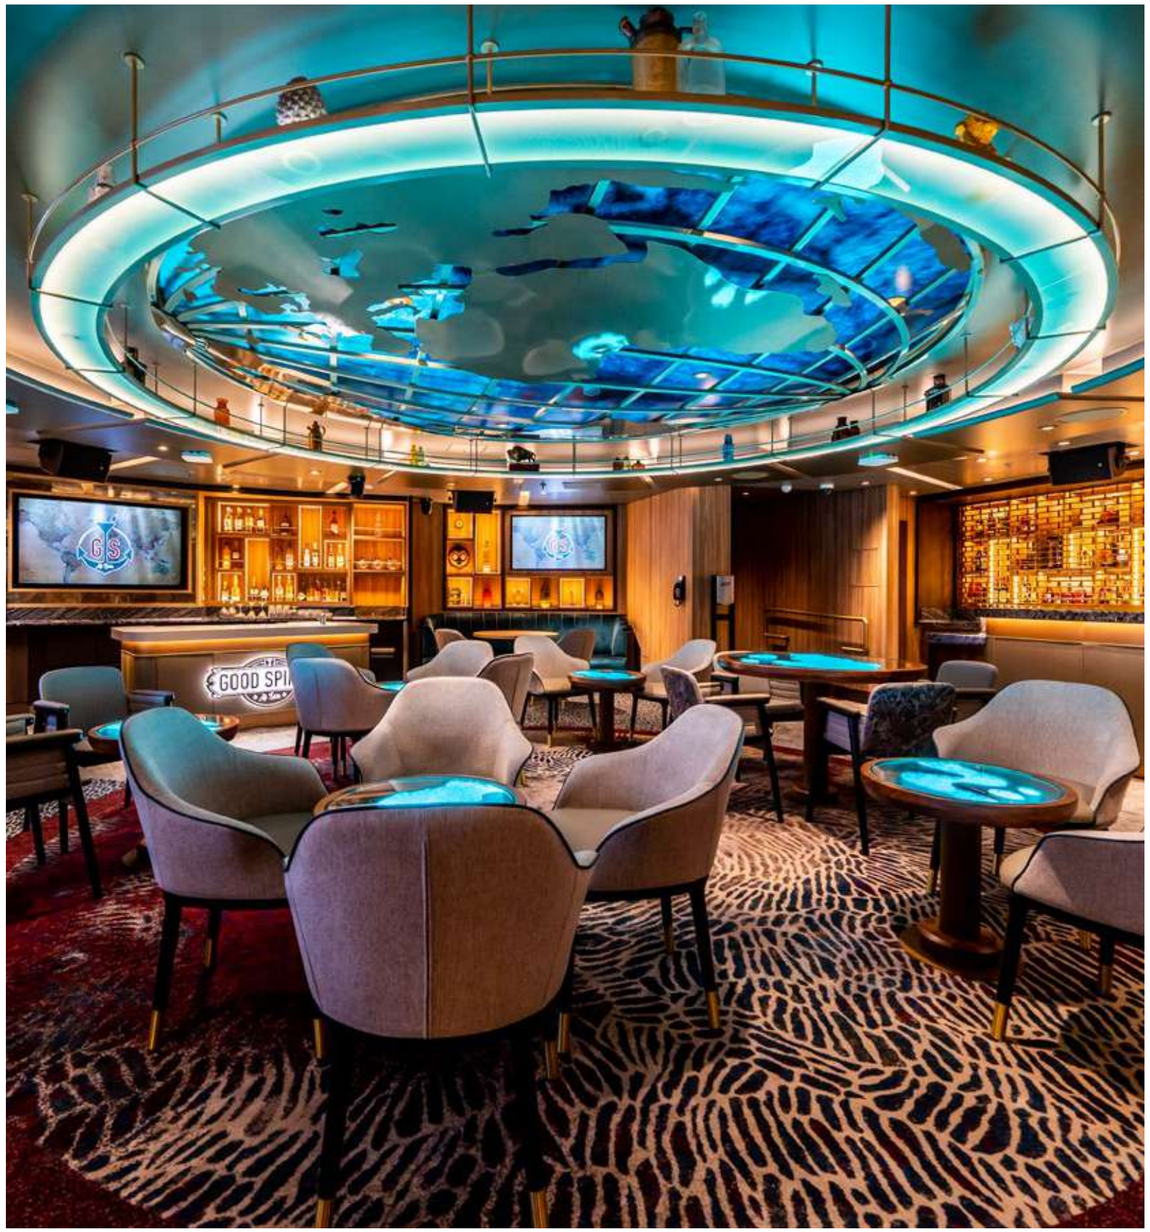

Designed to offer an intimate and immersive experience, Good Spirits at Sea, aboard Princess Cruises' Sphere Class Ships, blends design, craftsmanship, and technical precision in a space with a distinct identity.

Its defining feature is a custom architectural centerpiece fabricated through complex metalworking techniques and executed with meticulous attention to detail.

The Humidor Cigar Lounge, aboard Norwegian Prima Class, is a refined retreat for cigar enthusiasts, furnished in a classic style and set apart from the ship's other public areas to ensure privacy and relaxation.

Custom parquet flooring composed of three wood species is paired with brass detailing and decorative leather wall finishes, creating a warm and inviting atmosphere throughout.

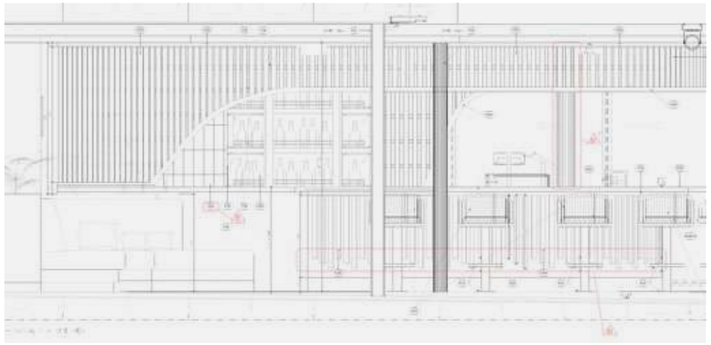

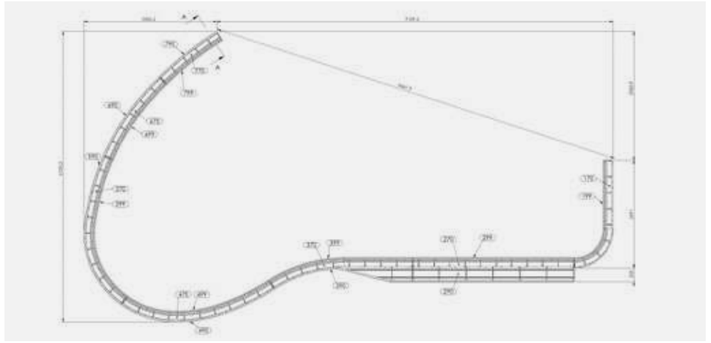

Pane e Sole Bar & Bistro aboard Mein Schiff Relax captures the relaxed spirit of Mediterranean outdoor living, interpreted through a contemporary and refined design.

A defining feature of the project is its architectural louver structure, fabricated in steel with a wood-effect finish that combines visual warmth with the durability required in a marine environment.

Carefully selected materials and close attention to detail create a welcoming and functional space designed for comfort and uninterrupted views of the sea.

Suites

Suites are the highest expression of guest care on board. These exclusive spaces are designed for a stay where elegance, comfort and privacy come together in perfect balance.

A careful selection of fine materials and state-of-the-art amenities, combined with craftsmanship that turns every piece of furniture into a one-of-a-kind solution, creates spaces built around the guest, with an atmosphere of well-being and seclusion.

→
A panoramic suite overlooking the sea, where wide, angled windows bring the horizon inside. The furnishings are custom-made: a bar counter clad in bronze mirrored panels with an illuminated top, and seating with a curved slatted frame. A coffered ceiling with a skylight and perimeter cove lighting enhances the natural light.

←
In the dining area of an onboard suite, paneled walls with fabric inserts and raised moldings create a warm, intimate setting. A sideboard with a marble top and a dropped ceiling in a soft blush tone complement the neutral palette of the furnishings, while a hand-blown glass chandelier becomes the focal point of the room.

↓
The largest suites bring the scale and comfort of a private residence on board. In the living room, a dark lacquered wall unit integrates brass-framed display cabinets. In the bedroom, a headboard of diamond-tufted panels plays off a sunburst-veneered footboard and a dark ceiling set with a luminous decorative feature.

Entertainment

Entertainment areas require a design approach that looks beyond today’s needs. As technology, content, and user expectations continue to evolve, these spaces must remain flexible enough to adapt over time.

That is why coordination between systems, structures, and fit-out elements plays a central role from the earliest stages of the project. Through detailed engineering, Mestieri develops modular, highly functional environments designed to accommodate future upgrades and new attractions while maintaining safety, quality, and a seamless guest experience.

→
Game Zone aboard Norwegian Luna reimagines Norwegian Cruise Line’s Galaxy Pavilion through a bold new vision shaped by technology and futuristic design.

A raised access floor efficiently distributes service infrastructure throughout the space, while engineered modular architectural elements help shape its distinctive character.

Metallic finishes, achieved through specialized coating techniques, give the interior a distinctly contemporary feel.

Sound-absorbing materials and acoustic-control measures help maintain comfort throughout the surrounding areas.

Located on Deck 7, Carnival Jubilee's casino is one of the largest in the fleet.

Among rows of slot machines and gaming tables, technical requirements such as lighting and acoustic control are seamlessly integrated into an interior designed to feel both elegant and engaging. A sense of excitement and refinement runs through the space.

Retail

On board, premium brands are given dedicated retail environments designed to create an engaging shopping experience while reinforcing their identity within the unique setting of a cruise ship.

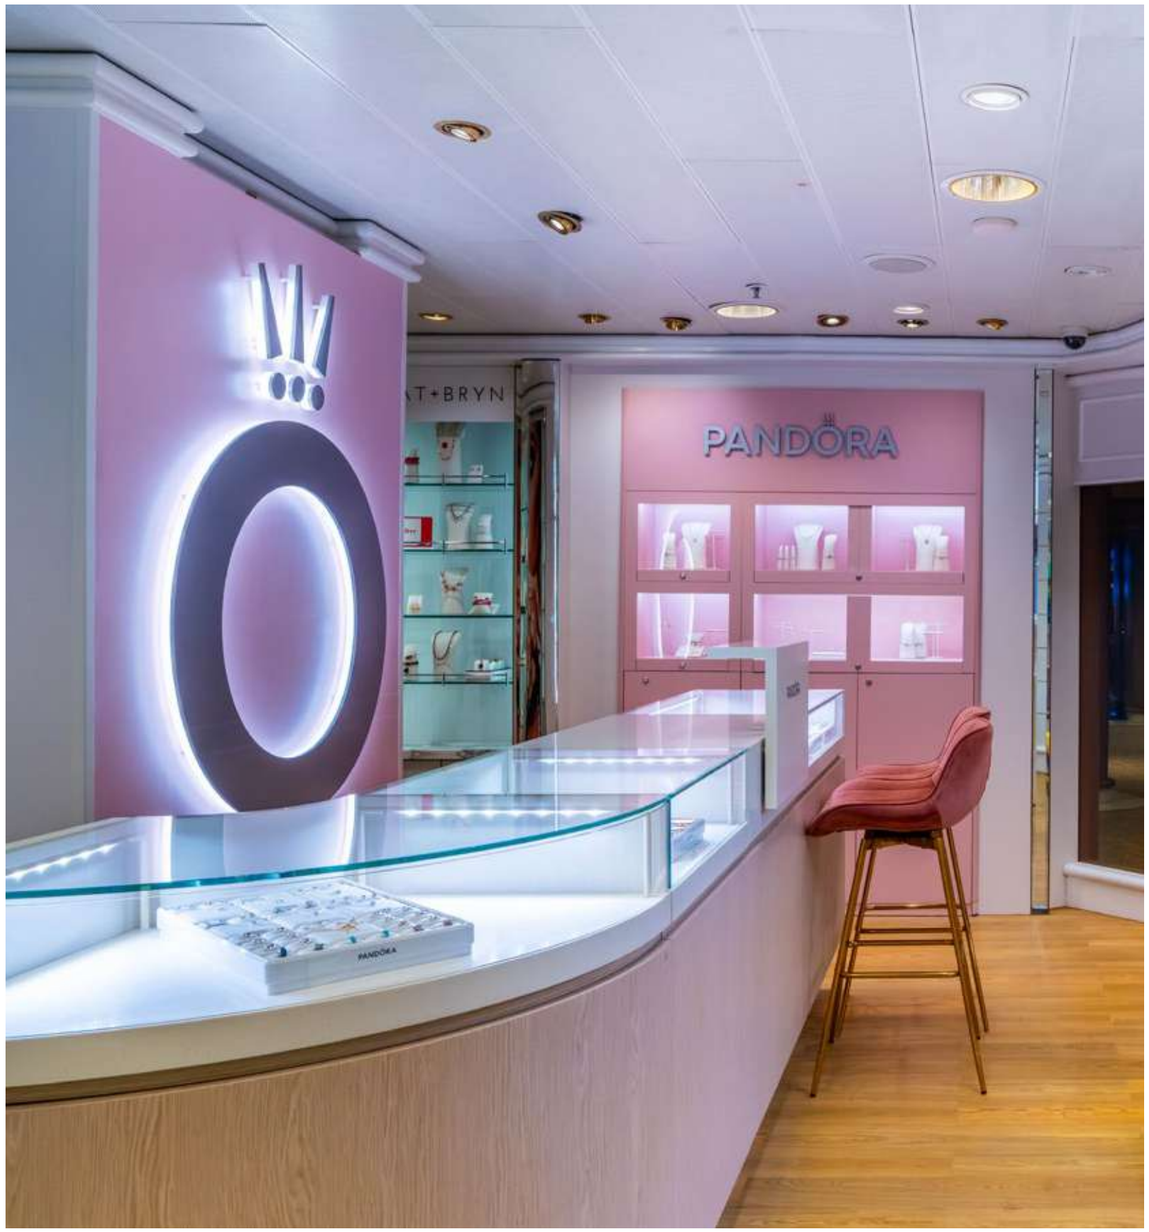

Layouts and display solutions are carefully planned to make the most of every available square foot, maximizing product visibility and commercial effectiveness while remaining true to the brand's identity.

Retail environments are refreshed through custom materials, bespoke fixtures, and carefully considered details that reflect the evolving aesthetics of luxury retail.

→
Each retail concept begins with a detailed understanding of the brands on board and the passengers they are designed to serve.

The priorities established by the shipowner or retail operator guide every stage of the project, informing layouts, circulation, and the overall shopping experience, to ensure alignment with customer expectations.

Every detail helps create a shopping environment that feels unmistakably true to the brand.

From custom fixtures to display solutions, every element is designed to showcase products at their best and enhance the passenger experience.

Each project balances commercial objectives, execution quality, and compliance with the technical standards and international regulations that govern the cruise industry.

Tech@Sea highlights TSI's ability to deliver highly specialized retail spaces where design, systems integration, and custom fit-out are developed as a single, coordinated solution.

Custom-built elements, premium materials, and high-quality detailing meet the demanding requirements of the marine industry while improving comfort, functionality, and the passenger's overall experience.

The project demonstrates how technological innovation can create tangible value while enhancing the customer experience.

Family & Kids

A world of color, shape, and texture designed specifically for younger guests, combining interactive attractions with educational activities that are as engaging as they are fun.

Designing these spaces means balancing fun and safety from the very beginning, using durable, certified materials designed to withstand the wear and tear of active daily use. Creative geometries and dynamic forms give each space a strong visual identity while sparking children's imagination.

→
The Kids & Teens Club aboard Norwegian Prima features a bright, technology-inspired environment where games, parties, and activities bring young guests together. Video game consoles and a surround-sound cinema provide dedicated spaces for entertainment and social interaction.

Safety and hygiene are ensured by materials and finishes designed to withstand everyday use. Custom graphic films transform the walls with vibrant, playful imagery.

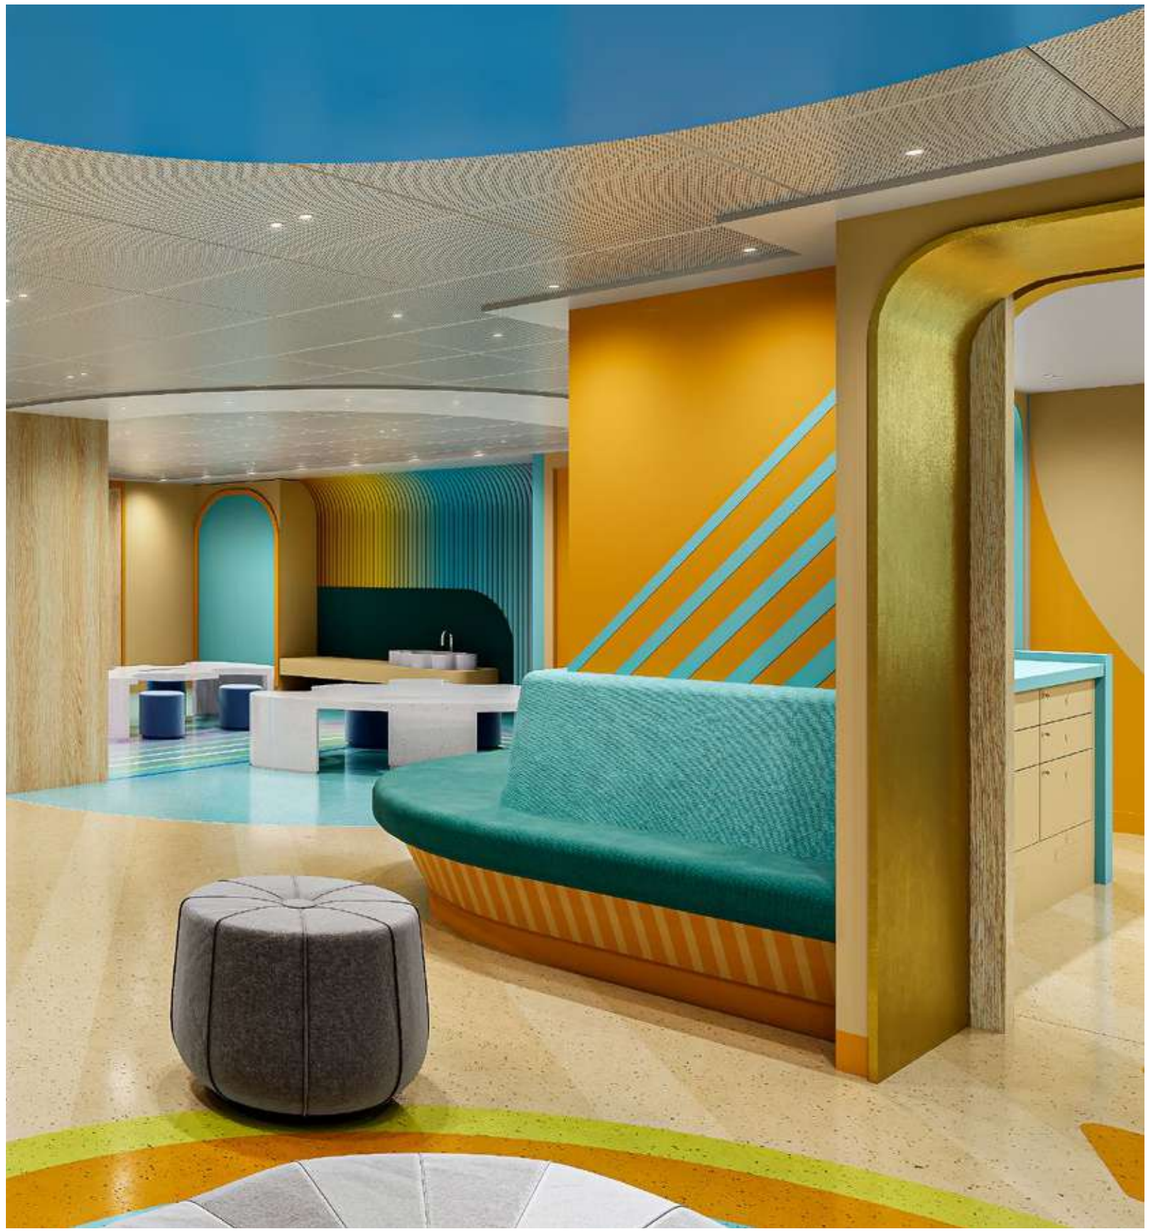

Splash Academy aboard Norwegian Aqua is a colorful environment designed around creative play, artistic activities, sports, and video games.

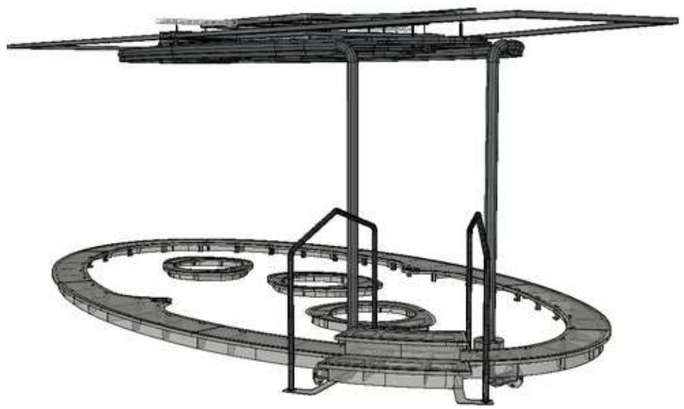

Easy-to-clean materials and finishes contribute to a safe, child-friendly environment, complemented by a dedicated monitoring and safety system. Custom wall graphics create a continuous visual identity throughout the space. A custom movable partition allows spaces to be reconfigured as needed, providing maximum flexibility for different activities.

Open Decks & Pools

Outdoor areas present some of the greatest design and construction challenges in the cruise industry, requiring high performance in particularly demanding operating conditions.

Pools, splash zones, showers, hot tubs, tensile structures, pergolas, and cabanas must withstand constant exposure to weather, the marine environment, solar radiation, and heavy daily use. Properly treated and coated steel provides long-term durability, while structural integrity is ensured through engineering calculations and dedicated testing.

→
Splash Pad is an interactive water play area created specifically for younger guests aboard TUI Cruises' InTUItion-class ships.

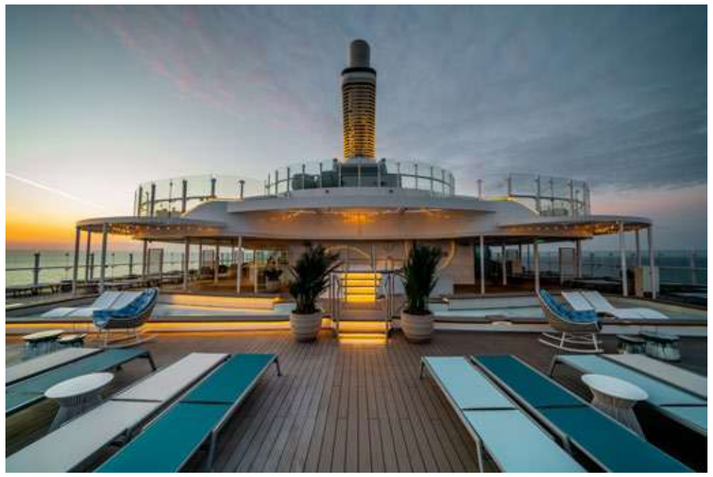

Beyond the design and construction of the space itself, the project included the development of the entire water system, essential to maintaining a continuous, controlled, and visually engaging flow of water. Cascading water curtains, floor-level spray jets, and integrated lighting create a vibrant and engaging water-play environment shaped as much by engineering as by design.

Agorà is a signature feature on board TUI Cruises' InTUItion-class ships. Inspired by the public squares of ancient Greece, it unfolds across a series of stepped levels that descend toward the Infinity Pool. By eliminating visual barriers and railings, the design opens uninterrupted views of the horizon.

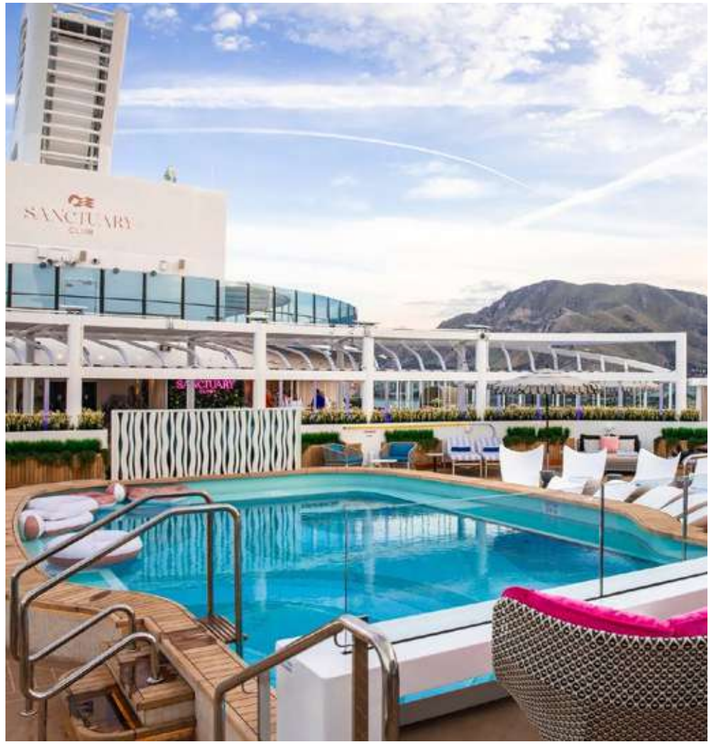

Located at the stern of the ship aboard TUI Cruises InTUItion, X-Sundeck is an exclusive sun deck reserved for suite guests, complete with private access, a dedicated bar and dining service, and premium amenities.

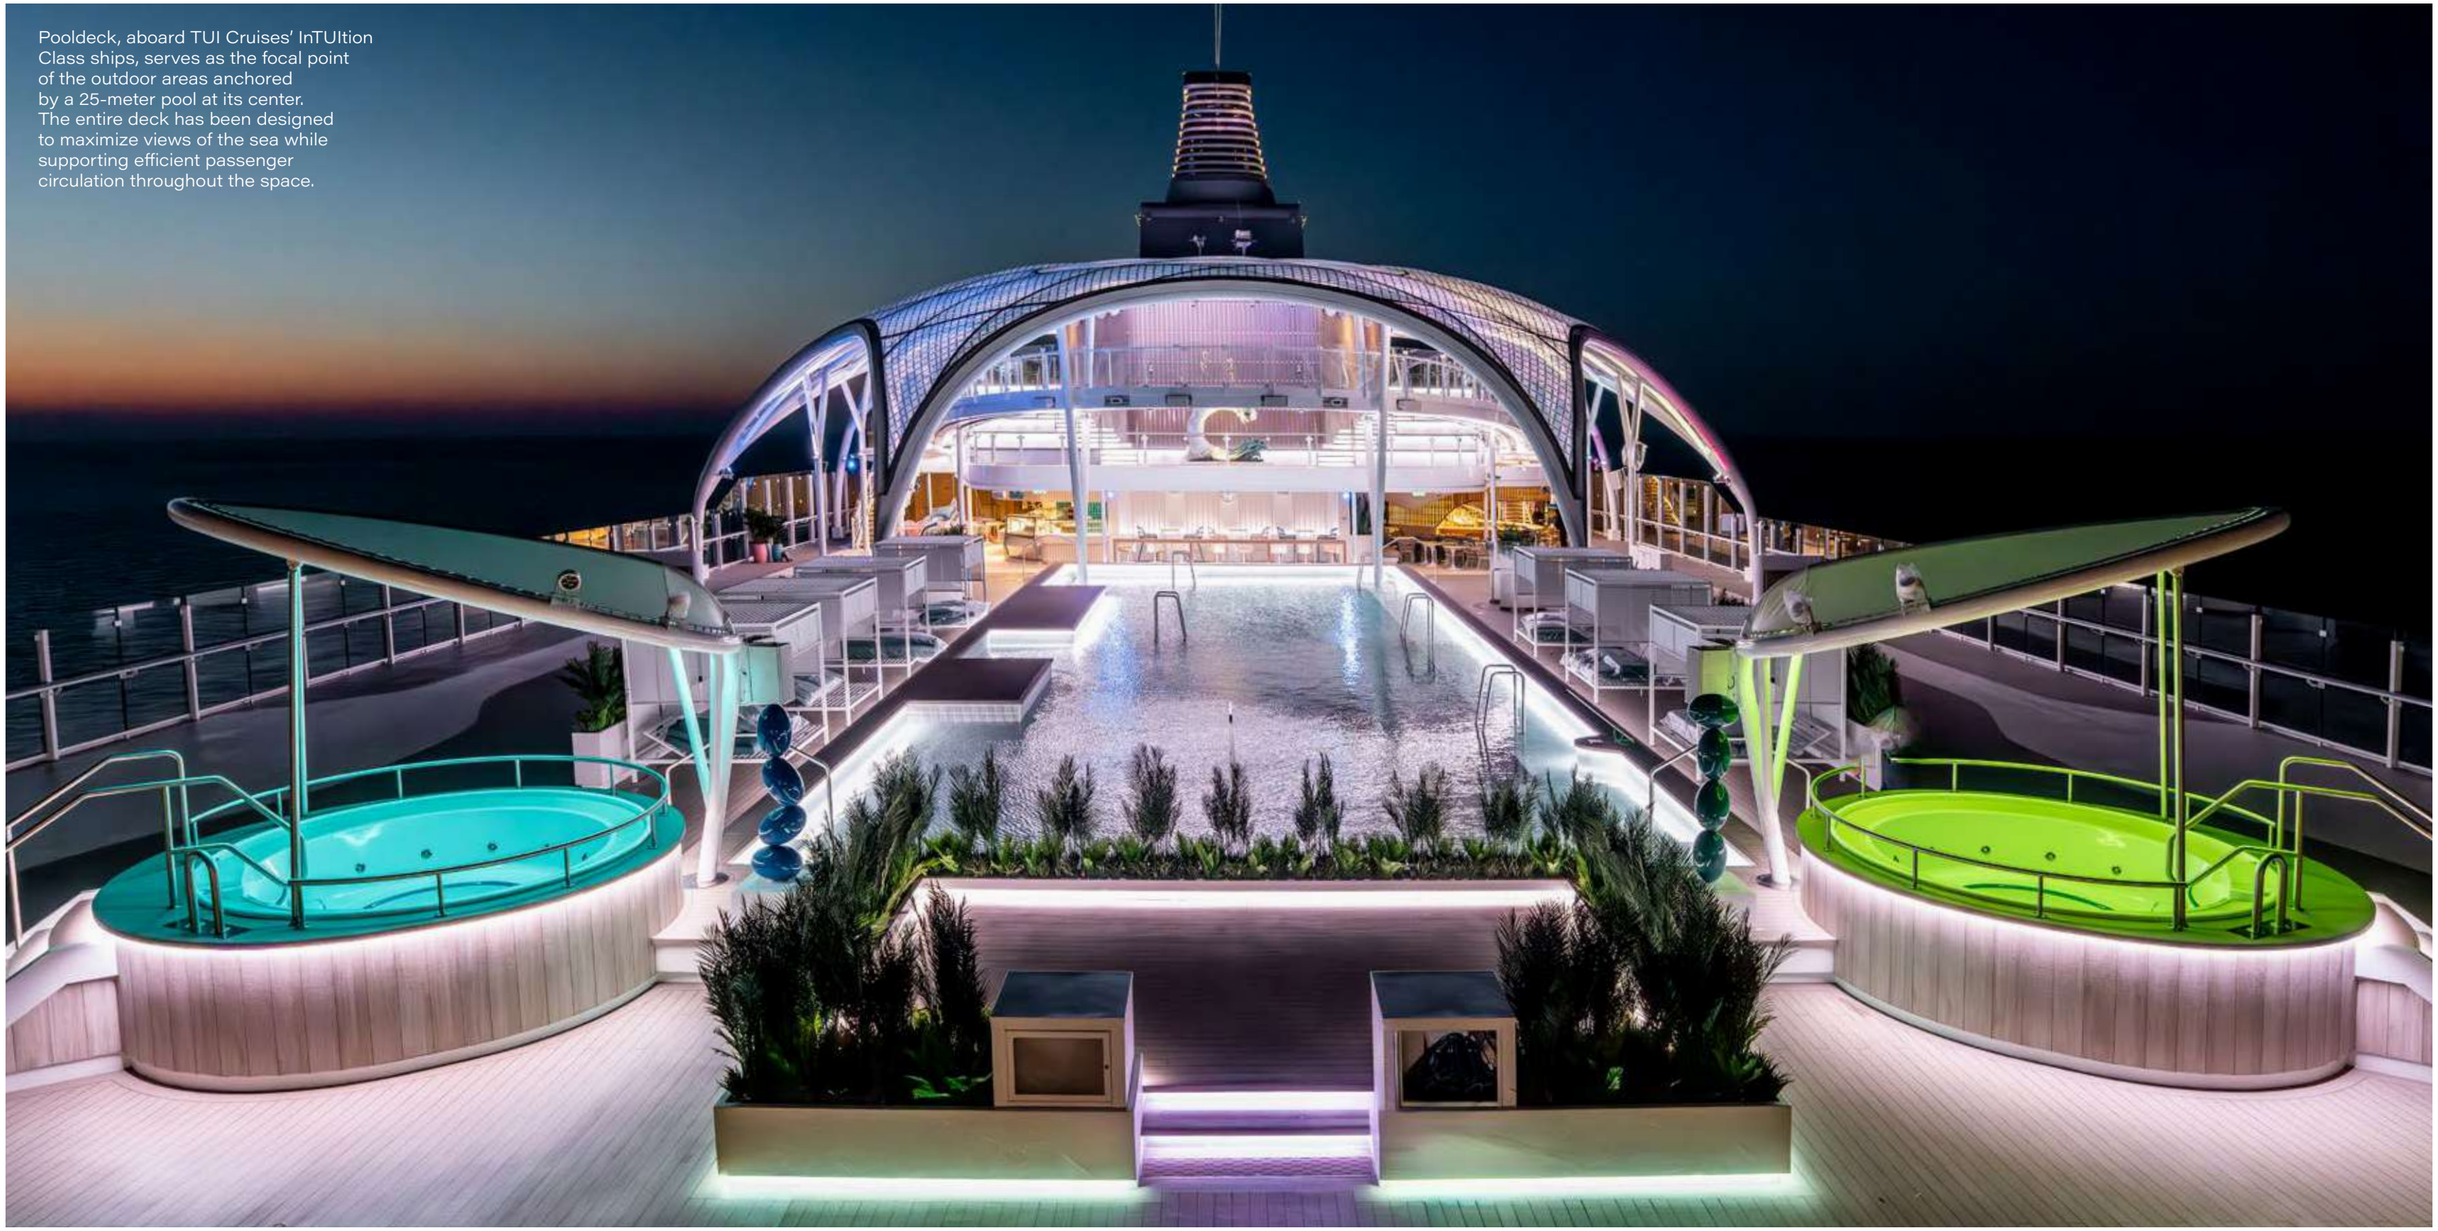

A whirlpool area and a spacious sun-shelf complete the experience, offering comfort and privacy at the highest point of the vessel.

With its refined, understated atmosphere, the Sanctuary Club aboard Sun Princess offers a private outdoor retreat dedicated to relaxation and well-being.

A generously sized pool anchors the space, surrounded by expansive sun decks, bars, and reserved areas set apart from the ship's busier public spaces. Private cabanas enhance the sense of comfort and exclusivity, delivering a guest experience more often associated with a luxury resort than a cruise ship.

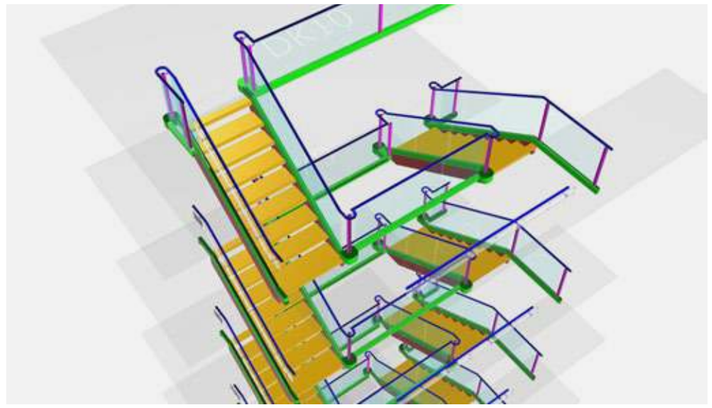

Pooldeck, aboard TUI Cruises' InTUItion Class ships, serves as the focal point of the outdoor areas anchored by a 25-meter pool at its center. The entire deck has been designed to maximize views of the sea while supporting efficient passenger circulation throughout the space.

Passenger Stairs

Passenger stairways are among the ship’s primary circulation routes, connecting decks and public spaces throughout the vessel.

Designing these spaces requires careful consideration of safety, comfort, and ease of movement, from the selection of materials and finishes to the effectiveness of emergency egress routes.

→
Aboard Ilma, on The Ritz-Carlton Yacht Collection, the interior stairways are designed to do more than connect one deck to another. Glass balustrades with polished stainless-steel handrails work together with the square geometry of the stairwell to bring natural light deep into the vessel, enhancing the sense of openness on board.

Light-colored treads with a regular geometric texture are framed by dark metal structures that echo the central column, finished with distinctive cross-stitched leather detailing.

Restrooms

Public restrooms, distributed throughout the ship, require careful planning to make the most of every available square foot. The challenge lies in achieving consistent quality across every unit by integrating technical systems and finish materials from the earliest stages of design.

Because they are among the most frequently used spaces on board, durability is essential. Wear- and moisture-resistant materials are paired with thoughtful detailing, carefully planned lighting, and refined finishes that elevate an everyday necessity.

→
Elegant finishes and premium fixtures provide lasting performance, with the same attention to detail found throughout the public spaces of The Ritz-Carlton Yacht Collection fleet.

Wellness & Spa

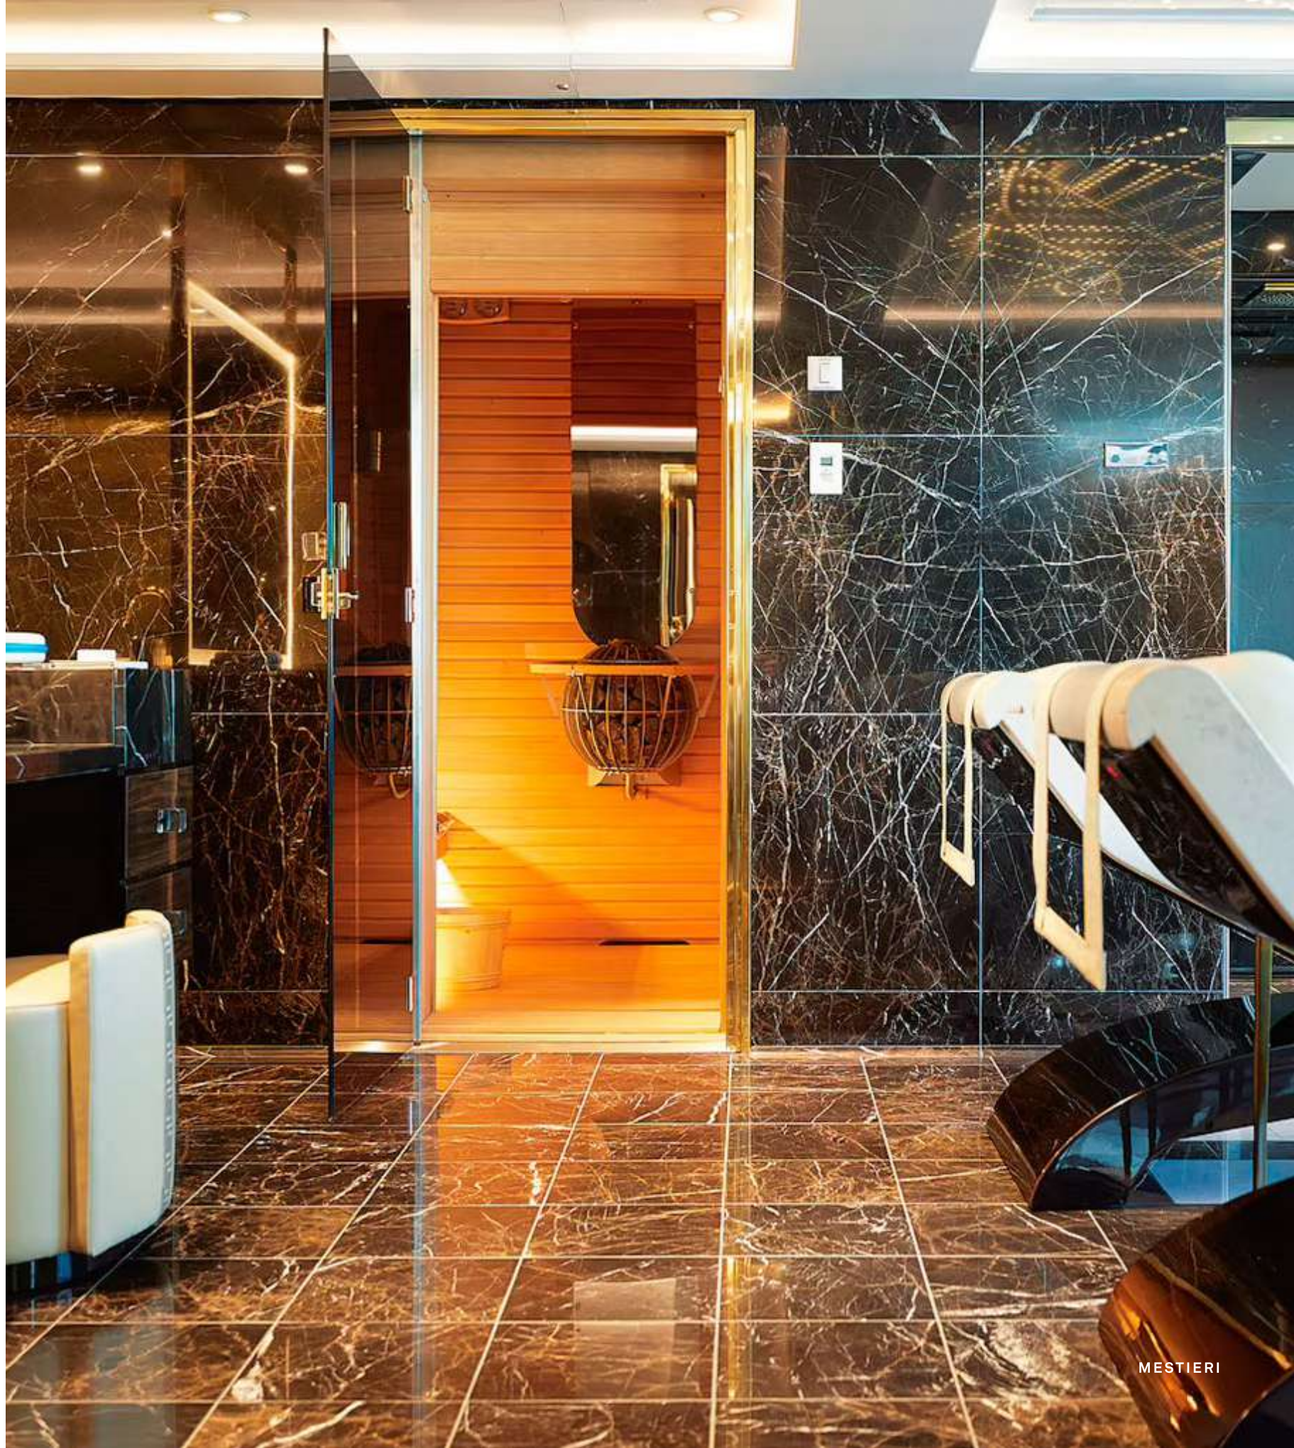

Wellness areas are designed to welcome guests into environments centered on comfort, relaxation, and exclusivity, balancing spacious social areas with more intimate treatment rooms that offer privacy and personalized experiences.

Saunas, steam rooms, infrared cabins, and whirlpools make extensive use of premium materials such as marble and natural wood, while sophisticated ventilation systems, waterproofing solutions, and the technical infrastructure required to support these environments remain discreetly hidden from view.

→
The Wellness & Spa aboard Seven Seas Grandeur is designed as a retreat for relaxation and well-being, where premium materials, carefully selected stone surfaces, and refined detailing create a sense of understated luxury.

A backlit onyx feature wall serves as the visual centerpiece of the space, while furnishings and accessories are chosen with guest comfort in mind.

Every detail, from the finishes to the heated loungers, is designed to support a restorative onboard wellness experience.
